Annual Report of the Education Department

1921

corporate purpose has become a global phenomenon in recent years increasingly businesses are expected to produce profitable solutions to the problems of people and planet and not to profit from producing problems for people or planet world economic forum however the literature on how companies can build purpose into their corporate dna is still very nascent this book first of its kind focuses on how companies in asia are building purpose into their journey it contains case studies of companies and their current journey to become more purpose driven why they do it and how they did it

making up numbers a history of invention in mathematics offers a detailed

but accessible account of a wide range of mathematical ideas starting with elementary concepts it leads the reader towards aspects of current mathematical research the book explains how conceptual hurdles in the development of numbers and number systems were overcome in the course of history from babylon to classical greece from the middle ages to the renaissance and so to the nineteenth and twentieth centuries the narrative moves from the pythagorean insistence on positive multiples to the gradual acceptance of negative numbers irrationals and complex numbers as essential tools in quantitative analysis within this chronological framework chapters are organised thematically covering a variety of topics and contexts writing and solving equations geometric construction coordinates and complex numbers perceptions of infinity and its permissible uses in mathematics number systems and evolving views of the role of axioms through this approach the author demonstrates that changes in our understanding of numbers have often relied on the breaking of long held conventions to make way for new inventions at once providing greater clarity and widening mathematical horizons viewed from this historical perspective mathematical abstraction emerges as neither mysterious nor immutable but as a contingent developing human activity making up numbers will be of great interest to undergraduate and a level students of mathematics as well as secondary school teachers of the subject in virtue of its detailed treatment of mathematical ideas it will be of value to anyone seeking to learn more about the development of the

subject

this practical reference for medicinal and pharmaceutical chemists combines the theoretical background with modern methods as well as applications from recent lead finding and optimization projects divided into two parts on the thermodynamics and kinetics of drug receptor interaction the text provides the conceptual and methodological basis for characterizing binding mechanisms for drugs and other bioactive molecules it covers all currently used methods from experimental approaches such as itc or spr right up to the latest computational methods case studies of real life lead or drug development projects are

also included so readers can apply the methods learned to their own projects finally the benefits of a thorough binding mode analysis for any drug development project are summarized in an outlook chapter written by the editors

text html charset iso 8859 1 equiv content type body a philologically
robust approach to the history of ancient hebrew in this book the authors
work toward constructing an approach to the history of ancient hebrew
that overcomes the chasm of academic specialization the authors
illustrate how cross textual variable analysis and variation analysis
advance research on biblical hebrew and correct theories based on extra
linguistic assumptions intuitions and ideologies by focusing on variation of
forms uses in the masoretic text and variation between the masoretic text
and other textual traditions features a unique approach that examines the
nature of the sources and the description of their language together
extensive bibliography for further research tables of linguistic variables
and parallels

as time goes on big companies such as amazon microsoft google and

apple become increasingly interested in virtual assistants the interest and development of social robots has put research into affective and social computing at the forefront of the scene the aim of opinion analysis in interactions is to present methods based on artificial intelligence through a combination of machine learning models and symbolic approaches also discussed are natural language processing and affective computing via the analysis and generation of socio emotional signals the book explores the analysis of opinions in human human interaction and tackles the less explored yet crucial challenges related to the analysis methods of user opinions within the context of human agent interaction it also illustrates the implementation of strategies for selecting and generating agent utterances in response to user opinions and opens up perspectives on the agent s multimodal generation of utterances that hold attitudes

learn big data from the ground up with this complete and up to date resource from leaders in the field big data concepts technology and architecture delivers a comprehensive treatment of big data tools terminology and technology perfectly suited to a wide range of business professionals academic researchers and students beginning with a fulsome overview of what we mean when we say big data the book

moves on to discuss every stage of the lifecycle of big data you'll learn about the creation of structured unstructured and semi structured data data storage solutions traditional database solutions like sql data processing data analytics machine learning and data mining you'll also discover how specific technologies like apache hadoop sqoop and flume work big data also covers the central topic of big data visualization with tableau and you'll learn how to create scatter plots histograms bar line and pie charts with that software accessibly organized big data includes illuminating case studies throughout the material showing you how the included concepts have been applied in real world settings some of those concepts include the common challenges facing big data technology and technologists like data heterogeneity and incompleteness data volume and velocity storage limitations and privacy concerns relational and non relational databases like rdbms nosql and newsql databases virtualizing big data through encapsulation partitioning and isolating as well as big data server virtualization apache software including hadoop cassandra avro pig mahout oozie and hive the big data analytics lifecycle including business case evaluation data preparation extraction transformation analysis and visualization perfect for data scientists data engineers and database managers big data also belongs on the bookshelves of business intelligence analysts who are required to make decisions based on large volumes of information executives and managers who lead teams responsible for keeping or understanding large datasets will also benefit

from this book

A Treatise on Elementary Dynamics, etc

1875

this proceedings volume contains extended abstracts of talks presented at the 18th symposium on operations research held at the university of cologne september 13 1993 the symposia on operations research are the annual meetings of the gesellschaft für mathematik ökonometrie und operations research gmoor a scientific society providing a link between research and applications in the areas of applied mathematics economics and operations research the broad range of interests and scientific activities covered by gmoor and its members was demonstrated by about 250 talks presented at the 18th symposium as in recent years emphasis was placed on optimization and stochastics this year with a special focus on combinatorial optimization and discrete mathematics we appreciate that with sections on parallel and distributed computing and on scientific computing also new fields could be integrated into the scope of the gmoor this book contains extended abstracts of most of the papers presented at the conference long versions and full papers of the talks are expected to appear elsewhere in refereed periodicals the contributions were divided into sixteen sections 1 theory of optimization 2 computational methods of optimization 3 combinatorial optimization and discrete mathematics 4

scientific computing 5 decision theory 6 mathematical economics and
game theory 7 banking finance and insurance 8 econometrics 9
macroeconomics and economic theory 10 stochastics 11 production and
logistics 12 system and control theory 13 routing and scheduling 14
knowledge based systems 15 information systems and 16 parallel and
distributed computing
