adolescent researchers are increasingly aware that they must examine development both across time and across context to do so however requires new conceptualizations and methodological approaches to the study of development including attention to the pathways young people choose in adolescence and follow into adulthood this volume assembles work by key researchers in the field

who are struggling to understand how developmental trajectories are constructed and maintained throughout the adolescent period a complete understanding of developmental pathways requires the recognition that adolescents social contexts family school neighborhood and or peer group are important influences on the choices they make at this developmental period researchers have traditionally studied contexts in isolation rather than examining the interrelationships among contexts and their implications for adolescent development the present volume seeks to address this gap in the literature with attention given not only to the interrelationships among contexts for white middle class youth but also to these issues for minority adolescents in neighborhoods that vary in terms of access to resources it concludes with an examination of researcher community collaboration as a strategy to move communities toward a greater awareness of adolescent development and the problems facing youth in their community and as a means to promote potential avenues for policy change and intervention

the premise of this book is that individuals and societies have an inexorable urge to morally develop by challenging the assumptions of the previous generation in terms of what is right and wrong the focus is on the nature and functional value of conflicts and challenges to the dominant moral and social values framework through this analysis individuals develop moral character through conflict with their local authority figures including parents the moral structure of societies evolves through intergenerational challenges to and contradictions with the dominant social order the book is divided into three parts to help frame this discussion part i directly takes up the issue of resistance as it occurs at a cultural level and the implications of such resistance for moral education and socialization part ii explores the normative forms of adolescent resistance and contrarian behavior that vex parents and teachers alike part iii brings back the issue of societal structure and culture to illustrate how negative features of society such as racial discrimination and economic disparity can feed into the construction of negative moral identity in youth posing challenges to moral education taken together this collection presents a rich counterpoint to the pictures of moral growth as the progressive sophistication of moral reasoning or the gradual accretion of moral virtues and cultural values it will benefit those in developmental social and cognitive psychology as well as sociology political science and education
