frictionless surface and each bears its fundamentalist contingent just observe a debate between creationists and evolutionists and the zeal and fervor with which the bible and darwin must be defended at any cost no matter what given all this it becomes readily apparent that religion and science display more in common than was once expected and that is precisely what is in peril in the following pages our expectations may the intrepid traveler benefit from the voyage

EIA publications directory, a user's guide 2006-03-24 a user s guide to thought and meaning presents a profound and arresting integration of the faculties of the mind of how we think speak and see the world ray jackendoff starts out by looking at languages and what the meanings of words and sentences actually do he shows that meanings are more adaptive and complicated than they re commonly given credit for and he is led to some basic questions how do we perceive and act in the world how do we talk about it and how can the collection of neurons in the brain give rise to conscious experience as it turns out the organization of language thought and perception does not look much like the way we experience things and only a small part of what the brain does is conscious jackendoff concludes that thought and meaning must be almost completely unconscious what we experience as rational conscious thought which we prize as setting us apart from the animals in fact rides on a foundation of unconscious intuition rationality amounts to intuition enhanced by language written with an informality that belies both the originality of its insights and the radical nature of its conclusions a user s guide to thought
