Modern Ideas of Evolution as Related to Revelation and Science 1891 why did the twentieth century witness unprecedented organized genocide can we learn why genocide is perpetrated by comparing different cases of genocide is the holocaust unique or does it share causes and features with other cases of state sponsored mass murder can genocide be prevented blending gripping narrative with trenchant analysis eric weitz investigates four of the twentieth century s major eruptions of genocide the soviet union under stalin nazi germany cambodia under the khmer rouge and the former yugoslavia drawing on historical sources as well as trial records memoirs novels and poems weitz explains the prevalence of genocide in the twentieth century and shows how and why it became so systematic and deadly weitz depicts the searing brutality of each genocide and traces its origins back to those most powerful categories of the modern world race and nation he demonstrates how in each of the cases a strong state pursuing utopia promoted a particular mix of extreme national and racial ideologies in moments of intense crisis these states targeted certain national and racial groups believing that only the annihilation of these enemies would enable the dominant group to flourish and in each instance large segments of the population were enticed to join in the often ritualistic actions that destroyed their neighbors this book offers some of the most absorbing accounts ever written of the population purges forever associated with the names stalin hitler pol pot and milosevic a controversial and richly textured comparison of these four modern cases it identifies the social and political forces that produce genocide

Evolution Fact or Fable? 2022-06-24 fully integrative approach to the sociobiology of caviomorph rodents brings together research on social systems with that on epigenetic neuroendocrine and developmental mechanisms of social behavior describes the social systems of many previously understudied caviomorph species identifying the fitness costs and benefits of social living in current day populations as well as quantified evolutionary patterns or trends highlights potential parallels and differences with other animal models

Life Evolution 2019-11-25 an up to date overview of the field of connectomics introducing concepts and mechanisms underlying brain network change at different stages the human brain undergoes massive changes during its development from early childhood and the teenage years to adulthood and old age across a wide range of species from c elegans and fruit flies to mice monkeys and humans information about brain connectivity connectomes at different stages is now becoming available new approaches in network neuroscience can be used to analyze the topological spatial and dynamical organization of such connectomes in changing connectomes marcus kaiser provides an up to date overview of the field of connectomics and introduces concepts and mechanisms underlying brain network changes during evolution and development drawing on a range of results from experimental clinical and computational studies kaiser describes changes during healthy brain maturation and during brain network disorders including such neurodevelopmental conditions as schizophrenia and depression brain injury and neurodegenerative disorders including dementia he argues that brain stimulation is an area where understanding connectome development could help in assessing long term effects of interventions changing connectomes is a suitable starting point for researchers who are new to the field of connectomics and also for researchers who are interested in the link between brain network organization and brain and cognitive development in health and disease matlab octave code examples available at the mit press website will allow computational neuroscience researchers to understand and extend the shown mechanisms of connectome development

**Isozymes in Plant Biology** 2012-12-06 this important and extensive volume presents part of the proceedings of the fourth international crustacean congress held in amsterdam in 1998 as the title implies crustaceans and the biodiversity crisis was the general underlying theme of all contributions at the congress with the turn of the century someone ought to assess the balance of our natural environment and of the various branches of biology that study its rapidly declining diversity from the five subthemes covered at the conference those of 1 diversity in time and space including systematics phylogeny and palaeontology 2b biogeography 3c larvae and 4 physiology and biochemistry including molecular biology and genetics are represented in this volume along with a few contributions from other subthemes e g 2a invasive crustacea 3a ecology 3b behaviour and 5 fisheries and aquaculture the book is primarily meant for scientists working at institutes involved in research on the group crustacea marine freshwater or terrestrial and or the disciplines covered individual carcinologists working on one of the themes discussed in this volume will find a wealth of interesting and timely contributions as will other scientists working in marine or freshwater biology or in soil ecology

**The Vitality of Christian Dogmas and Their Power of Evolution** 1898 throughout the twentieth century scholars artists and politicians have accused each other of historicism but what exactly did this mean judging by existing scholarship the answers varied enormously like many other isms historicism could mean nearly everything to the point of becoming meaningless yet the questions remain what made generations of scholars throughout the humanities and social sciences worry about historicism why did even musicians and members of parliament warn against historicism and what explains this remarkable career of the term across generations fields regions and languages focusing on the travels that historicism made this volume uses historicism as a prism for exploring connections between disciplines and intellectual traditions usually studied in isolation from each other it shows how generations of sociologists theologians and historians tried to avoid pitfalls associated with historicism and explains why the term was heavily charged with emotions like anxiety anger and worry while offering fresh interpretations of classic authors such as friedrich meinecke karl löwith and leo strauss this volume highlights how historicism took on new meanings connotations and emotional baggage in the course of its travels through time and place

**Progress of Science** 1895 medical geology the key to understanding the relationship between the geological environment and human health medical geology deals with of the impact of environmental factors on the health of individual human beings and communities in particular it studies environmental exposure to both macro and micronutrients in the geosphere hydrosphere and atmosphere respectively soil water and airborne dust which may positively or negatively impact human growth development and overall health the insights contributed by this burgeoning field can aid not only in individual medical cases but also in assessing disproportionately impacted communities and addressing global medical inequality medical geology en route to one health is among the first books to address this vital subject by summarizing recent research in this field it also serves as an introduction to the multidisciplinary one health methodology which unites medical geological and environmental insights in one continuous approach to public health medical geology readers will also find an explanation of the influence of the environment on nutrient availability case studies of well documented links between endemic diseases and environmental conditions a systematic analysis of the causes of essential element deficiencies in different world regions medical geology is an essential overview of the field for advanced students as well as medical environmental or geological researchers who wish to understand the complex relationship between the geological environment and human health

**Binary and Multiple Stars as Tracers of Stellar Evolution** 2012-12-06 this book encapsulates recent applications of ci methods in

the field of computational oncology especially cancer diagnosis prognosis and its optimized therapeutics the cancer has been known as a heterogeneous disease categorized in several different subtypes according to who's recent report cancer is a leading cause of death worldwide accounting for over 10 million deaths in the year 2020 therefore its early diagnosis prognosis and classification to a subtype have become necessary as it facilitates the subsequent clinical management and therapeutics plan computational intelligence ci methods including artificial neural networks anns fuzzy logic evolutionary computations various machine learning and deep learning and nature inspired algorithms have been widely utilized in various aspects of oncology research viz diagnosis prognosis therapeutics and optimized clinical management appreciable progress has been made toward the understanding the hallmarks of cancer development progression and its effective therapeutics however notwithstanding the extrinsic and intrinsic factors which lead to drastic increment in incidence cases the detection diagnosis prognosis and therapeutics remain an apex challenge for the medical fraternity with the advent in ci based approaches including nature inspired techniques and availability of clinical data from various high throughput experiments medical consultants researchers and oncologists have seen a hope to devise and employ ci in various aspects of oncology the main aim of the book is to occupy state of the art applications of ci methods which have been derived from core computer sciences to back medical oncology this edited book covers artificial neural networks fuzzy logic and fuzzy inference systems evolutionary algorithms various nature inspired algorithms and hybrid intelligent systems which are widely appreciated for the diagnosis prognosis and optimization of therapeutics of various cancers besides this book also covers multi omics exploration gene expression analysis gene signature identification of cancers genomic characterization of tumors anti cancer drug design and discovery drug response prediction by means of ci and applications of iot iomt and blockchain technology in cancer research

*Homilies of Science* 1892 brendan hyde identifies four characteristics of children's spirituality the felt sense integrating awareness weaving the threads of meaning and spiritual questing these characteristics can be observed in children if those who work with them know what to look for and are alert to the time place and space in which children find themselves this book provides ways in which schoolteachers and parents can nurture and foster these particular characteristics of children's spirituality it also considers two factors material pursuit and trivialising which may inhibit children's expression of their spirituality children and spirituality will be of great interest to educators policy makers parents and others who work with and seek to nurture the spirituality of children

*Bulletin of Books in the Various Departments of Literature and Science Added to the Public Library of Cincinnati During the Year...* 1885 systematics and taxonomy of australian birds presents an up to date classification of australian birds building on the authors 1994 book the taxonomy and species of birds of australia and its territories it incorporates the extensive volume of relevant systematic work since then the findings of these studies are summarised and evaluated in the explanations for the taxonomic treatments adopted and with the extensive citations the book serves as a comprehensive introduction to the recent systematic literature of australian birds all species of birds that have been recorded from the australian mainland tasmania island territories and surrounding waters are treated and listed along with extant native species all accepted vagrants recently extinct since 1800 native species and established introduced species are included

*Proceedings of the American Philosophical Society Held at Philadelphia for Promoting Useful Knowledge* 1889 the neanderthals populated western europe from nearly 250 000 to 30 000 years ago when they disappeared from the archaeological record in turn populations of anatomically modern humans homo sapiens came to dominate the area seeking to understand the nature of this

replacement which has become a hotly debated issue paul mellars brings together an unprecedented amount of information on the behavior of neanderthals his comprehensive overview ranges from the evidence of tool manufacture and related patterns of lithic technology through the issues of subsistence and settlement patterns to the more controversial evidence for social organization cognition and intelligence mellars argues that previous attempts to characterize neanderthal behavior as either modern or ape like are both overstatements we can better comprehend the replacement of neanderthals he maintains by concentrating on the social and demographic structure of neanderthal populations and on their specific adaptations to the harsh ecological conditions of the last glaciation mellars s approach to these issues is grounded firmly in his archaeological evidence he illustrates the implications of these findings by drawing from the methods of comparative socioecology primate studies and pleistocene paleoecology the book provides a detailed review of the climatic and environmental background to neanderthal occupation in europe and of the currently topical issues of the behavioral and biological transition from neanderthal to fully modern populations
