

Free read Philippines national water resources board Copy

these pages provide access to water resources data collected at approximately 1.9 million sites in all 50 states, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands. Water information is fundamental to national and local economic well-being, protection of life and property, and effective management of the nation's water resources. The USGS works with partners to monitor, assess, conduct targeted research, and deliver information on a wide range of water resources and conditions, including streamflow. Water resources are natural resources of water that are potentially useful for humans, for example, as a source of drinking water supply or irrigation water. 97% of the water on Earth is salt water, and only three percent is fresh water. Slightly over two-thirds of this is frozen in glaciers and polar ice caps. The National Model Water Atlas is a centralized website and data delivery system that will provide routinely updated and nationally consistent modeled water quantity, water quality, and water use information, along with long-term trends in observational data. The National Water Quality Assessment (NWQA) project is a leading source of scientific data and knowledge for development of science-based policies and management strategies to improve and protect our water resources. The Water Resources Division (WRD) of the
