Billboard magazine, founded in 1908, is the world's premier weekly music publication and a diverse digital events brand content and data licensing platform. Billboard publishes the most trusted charts and offers unrivaled reporting about the latest music video gaming media digital and mobile entertainment issues and trends. Digital technologies have profoundly impacted the arts and expanded the field of sculpture since the 1950s. Art history however continues to pay little attention to sculptural works that are conceived and materialized using digital technologies. How can we rethink the artistic medium in relation to our technological present and its

historical precursors a number of theoretical approaches discuss the implications of the so called aesthetics of the digital referring above all to screen based phenomena for the first time this publication brings together international and trans historical research perspectives to explore how digital technologies re configure the understanding of sculpture and the sculptural leading into the post digital age up to date research on digital technologies expansion of the concept of sculpture linking historical sculptural debates with discourse on the new media and post digital culture as nations race to hone contact tracing efforts the world s experts consider strategies for maximum transparency and impact as public health professionals around the world work tirelessly to respond to the covid 19 pandemic it is clear that traditional methods of contact tracing need to be augmented in order to help address a public health crisis of unprecedented scope innovators worldwide are racing to develop and implement novel public facing technology solutions including digital contact tracing technology these technological products may aid public health surveillance and containment strategies for this pandemic and become part of the larger toolbox for future infectious outbreak prevention and control as technology evolves in an effort to meet our

current moment johns hopkins project on ethics and governance of digital contact tracing technologies a rapid research and expert consensus group effort led by dr jeffrey p kahn of the johns hopkins berman institute of bioethics in collaboration with the university s center for health security carried out an in depth analysis of the technology and the issues it raises drawing on this analysis they produced a report that includes detailed recommendations for technology companies policymakers institutions employers and the public the project brings together perspectives from bioethics health security public health technology development engineering public policy and law to wrestle with the complex interactions of the many facets of the technology and its applications this team of experts from johns hopkins university and other world renowned institutions has crafted clear and detailed guidelines to help manage the creation implementation and application of digital contact tracing digital contact tracing for pandemic response is the essential resource for this fast moving crisis contributors joseph ali jd anne barnhill phd anita cicero jd katelyn esmonde phd amelia hood ma brian hutler phd jd jeffrey p kahn phd mph alan regenberg mbe crystal watson drph mph matthew watson robert califf md macc ruth faden phd mph divya
