the problem of increasing human energy is an essay written by nikola tesla to honor his agreement with the editor of the century magazine to produce an article on his findings in this essay tesla explained the superiority of the wireless system he envisioned but the article was more of a lengthy philosophical treatise than an understandable scientific description of his work he contemplates on how a man should utilize his time and body what makes a man productive in his highest capacity and what increases man s energy in the human capacity tesla approaches human potential energy from the physics perspective tying it to the mass speed and removal of retarding forces when human civilization was just starting to impact the natural world tesla was already worrying about problems of overpopulating and running out unrenewable resources he was not only pointing this out but he was already working out the solutions

The Inventions, Researches and Writings of Nikola Tesla 1894

nikola tesla 1856 1943 was a forerunner of the electronic age and one of science s greatest unsung heroes this book which was written with humor and élan provides unique insights into one of the leading figures in modern science his research created much of the foundation for contemporary electrical and communication systems however tesla s name and contributions are only faintly known today the visionary scientist speaks for himself in this volume originally published in a six part series in electrical experimenter magazine this edition

includes the essay the problem of increasing human energy with special reference to the harnessing of the sun s energy which anticipates latter day advances in environmental technology written with wit and élan this memoir offers fascinating insights into one of the great minds of modern science

nikola tesla was born in croatia then part of austria hungary on july 9 1856 and died january 7 1943 he was the electrical engineer who invented the ac alternating current induction motor which made the universal transmission and distribution of electricity possible tesla began his studies in physics and mathematics at graz polytechnic and then took philosophy at the university of prague he worked as an electrical engineer in budapest hungary and subsequently in france and germany in 1888 his discovery that a magnetic field could be made to rotate if two coils at right angles are supplied with ac current 90 out of phase made possible the invention of the ac induction motor the major advantage of this motor being its brush less operation which many at the time believed impossible
