identifying the main requirement of the historical genre with truthfulness they disagreed on their notions of historical truth some authors equated historical truth with verisimilitude thus harmonizing the quest for truth with other ingredients of their histories such as their political utility and rhetorical aptness others instead rejected the notion of verisimilitude identifying historical truth with factuality accordingly they sought to produce bare and exhaustive accounts of all the things that pertained to their historical explorations often resorting to innovative disciplines such as archeology philology and the history of institutions the humanist historiographical debate is especially significant because the notion of verisimilitude encompassed crucial elements required for the development of methods of critical assessment by perceiving verisimilitude and factuality as irreconcilable quattrocento humanists reached a critical impasse those who were interested in factual truth mostly lacked the means to ascertain it while those that developed embryonic notions of historical criticism were not eminently concerned with the factual account of the past this critical weakness exposed humanists to considerable risks including that of accepting non verisimilar historical forgeries passed off as factual such forgeries eventually served as a testing ground for sixteenth and seventeenth century scholars who sought to restore factual truth by means of critical criteria grounded in verisimilitude thus overcoming the humanist impasse historical truth in fifteenth century italy addresses renaissance history philosophy rhetoric and jurisprudence to shed light on how humanists conceptualized truth and more specifically historical truth whilst educational theory has developed significantly in recent years much of the law curriculum remains content driven and delivered traditionally predominantly through lecture format students are in the main treated as empty vessels to be filled by the eminent academics of the day re thinking legal education under the common and civil law draws on the experience of teachers practitioners and students across the world who are committed to developing a more effective learning process little attention has historically been paid to the importance of the application of theory the role of reflective learning the understanding and acquisition of lawyering skills and the development of professional responsibility and wider ethical values with contributions from across the global north and south this book examines the history of educating our lawyers the influences and constraints that may shape the curriculum the means of delivering it and the models that could be used to tackle current shortcomings the whole is intended to represent what might be desirable and possible if we are to produce lawyers that are fit for purpose in the 21st century be that in either in civil or common law jurisdictions this book will be of direct assistance to those who wish to understand the theory and practice of legal pedagogy in an experiential context it will be essential reading for academics researchers and teachers in the fields of law and education particularly those concerned with curriculum design and developing interactive teaching methods it is likely to be of interest to law students too particularly those who value a more direct engagement in their learning in occasione del novantesimo compleanno di detlef heikamp fra i massimi indagatori del collezionismo storico fiorentino il 10 e 11 novembre 2017 si è tenuto l incontro di studi dedicato alla genesi dell epigrafia come scienza storica le gallerie degli uffizi sono state la cornice ideale per una simile iniziativa qui infatti si costituì a partire dal xvii secolo una delle raccolte epigrafiche greche e latine destinate a segnare nel profondo l evoluzione di questa branca di studi e proprio a questa istituzione detlef heikamp volle donare all indomani del disastroso attentato del 1993 una preziosa selezione di reperti provenienti dalla sua raccolta di iscrizioni alle due giornate fiorentine hanno discovery of the americas on italian renaissance art and culture imagining the americas in medici florence demonstrates that the medici grand dukes of florence were not only great patrons of artists but also early conservators of american culture in collecting new world objects such as featherwork codices turquoise and live plants and animals the medici grand dukes undertook a vicarious conquest of the americas as a result of their efforts renaissance florence boasted one of the largest collections of objects from the new world as well as representations of the americas in a variety of media through a close examination of archival sources including inventories and medici letters lia markey uncovers the provenance history and meaning of goods from and images of the americas in medici collections and she shows how these novelties were incorporated into the culture of the florentine court more than just a study of the discoveries themselves this volume is a vivid exploration of the new world as it existed in the minds of the medici and their contemporaries scholars of italian and american art history will especially welcome and benefit from markey s insight progetto storia applicazioni si sono evolute come sono state influenzate dal potere politico quale contributo hanno portato allo sviluppo economico e come ne sono state condizionate introduction to and survey of the field of law and society includes interdisciplinary perspectives on law from sociology criminology cultural anthropology political science social psychology and economics some years ago david freedberg opened a dusty cupboard at windsor castle and discovered hundreds of vividly colored masterfully precise drawings of all sorts of plants and animals from the old and new worlds coming upon thousands more drawings like them across europe freedberg finally traced them all back to a little known scientific organization from seventeenth century italy called the academy of lincaans or lynxes founded by prince federico cesi in 1603 the lincaans took as their task nothing less than the documentation and classification of all of nature in pictorial form in this first book length study of the lincaans to appear in english freedberg focuses especially on their unprecedented use of drawings based on microscopic observation and other new techniques of visualization where previous thinkers had classified objects based mainly on similarities of external appearance the lincaans instead turned increasingly to sectioning dissection and observation of internal structures they applied their new research techniques to an incredible variety of subjects from the objects in the heavens studied by their most famous and infamous member galileo galilei whom they supported at the most critical moments of his career to the flora and fauna of mexico bees fossils and the reproduction of plants and fungi but by demonstrating the inadequacy of surface structures for ordering the world the lincaans unwittingly planted the seeds for the demise of their own favorite method visual description as a mode of scientific classification profusely illustrated and engagingly written eye of the lynx uncovers a crucial episode in the development of visual representation and natural history and perhaps as important it offers readers a dazzling array of early modern drawings from magnificently depicted birds and flowers to frogs in amber monstrously misshapen citrus fruits and more the heavens on earth explores the place of the observatory in nineteenth century science and culture astronomy was a core pursuit for observatories but usually not the only one it belonged to a larger group of observatory sciences that also included geodesy meteorology geomagnetism and even parts of physics and statistics these pursuits coexisted in the nineteenth century observatory this collection surveys them as a coherent whole broadening the focus beyond the solitary astronomer at his telescope it illuminates the observatory s importance to technological military political and colonial undertakings as well as in advancing and popularizing the mathematical physical and cosmological sciences the contributors examine observatory techniques developed and used not only in connection with observatories but also by instrument makers in their workshops navy officers on ships civil engineers in the field and many others these techniques included the calibration and coordination of precision instruments for making observations and taking measurements methods of data acquisition and tabulation and the production of maps drawings and photographs as well as numerical textual and visual representations of the heavens and the earth they also encompassed the social management of personnel within observatories the coordination of international scientific collaborations and interactions with dignitaries and the public the state observatory occupied a particularly privileged place in the life of the city with their imposing architecture and ancient traditions state observatories served representative purposes for their patrons whether as symbols of a monarch s enlightened power a nation s industrial and scientific excellence or republican progressive values focusing on observatory techniques in settings from berlin london paris and rome to australia russia thailand and the united states the heavens on earth is a major contribution to the history of science contributors david aubin charlotte bigg guy boistel theresa levitt massimo mazzotti ole molvig simon schaffer martina
