By 2016, the International Space Station will face retirement. What then? When colonizing space, NASA blazes the trails, but private industry must build the roads for common citizens to inhabit space. There must be a station in near-earth orbit, only 400 miles high, where dedicated commercial activities can take place. It will be a hub of commerce where industrial scientists can perform chemistry and biology, tourists can have lavish vacations, solar power stations can be built and serviced, and where satellites can be tested and deployed. This is now within the grasp of several businesses that are determined to see this vision through. The commercialization of low-earth orbit can free NASA and the other space agencies around the world to colonize the moon and Mars. In fact, these agencies will be some of the first customers on an industrial facility in space. The commercial space station can be the crucible from which a new economy is forged, where better medicines, cleaner energy sources, stronger materials, and wider human experiences can be realized. These space stations are being deployed now; they will do practical, useful things in space for the common good of taxpayers. They will be new tools in the fight to solve medical and environmental problems to come, and they will provide jobs and tax revenue. The 21st century will be an industrial space century where average citizens can participate as entrepreneurs or customers.

Following its inception in the 1950s, cell-free protein synthesis made a tremendous impact on the basic life sciences. The use of cell-free systems was key to understanding molecular mechanisms underlying one of the most complicated processes found in nature: protein translation. Since this time, aggressive cutting-edge research and stiff competition

What Nurses Know...HIV/AIDS provides up-to-date, reliable, and practical health information for people living with HIV and their significant others in easy-to-understand, everyday language. The authors give information to help individuals with HIV navigate the healthcare system, covering everything from receiving an initial HIV test to becoming an engaged member of their healthcare team, knowledgeable and actively involved in their healthcare decisions. The authors include vignettes based on their real-life experiences that speak to the individual with AIDS. However, they approach HIV in a holistic manner and write not for the individual with HIV but also their friends, family, and community. What Nurses Know series: Nurses hold a critical role in modern health care that goes beyond their day-to-day duties. They share more information with patients than any other provider group and are alongside patients twenty-four hours a day, seven days a week, offering understanding of complex health issues, holistic approaches to ailments, and advice for the patient that extends to the family. Nurses themselves are a powerful tool in the healing process. The What Nurses Know series will give down-to-earth information, address consumers as equal partners in their care, and explain clearly what a reader needs to know and wants to know to understand their condition and move forward with their lives.

Cancer can affect people of all ages, and approximately one in three people are estimated to be diagnosed with cancer during their lifetime. Extensive research is being undertaken by many different institutions to explore potential new therapeutics, and biomaterials technology is now being developed to target, treat, and prevent cancer. This unique book discusses the role and potential of biomaterials in treating this prevalent disease. The first part of the book discusses the fundamentals of biomaterials for cancer therapeutics. Chapters in part two discuss synthetic vaccines, proteins, and polymers for cancer therapeutics. Part three focuses on diagnosis and drug delivery systems. Whilst the final set of chapters look at biomaterial therapies and cancer cell interaction, this extensive book provides a complete overview of the latest research into the potential of biomaterials for the diagnosis, therapy, and prevention of cancer. Biomaterials for cancer therapeutics is an essential text for academics, scientists, and researchers within the biomedical industry and will also be of interest to clinicians with a research interest in cancer therapies and biomaterials. by exploring crimmigration at its intersection with international refugee law this book exposes crimmigration as a system focused on the governance of territorially present migrants which internalizes the impracticability of removal and replaces expulsion with domestic policing the convergence of criminal law and immigration law known as crimmigration has become perhaps the paradigmatic model for governing migration in the age of globalization this book offers a unique way of understanding crimmigration as a system of governmentality the primary target of which is the population its principal form of knowledge being political economy and its essential mechanism being the apparatus of security it does so by characterizing a particular model of crimmigration termed crimmigration under international protection which targets refugees and asylum seekers who are principally undeportable under international law the book draws on comparative research of such models implemented worldwide combined with a detailed case study of the immigration detention system instigated in israel for coping with asylum seekers specifically and exclusively these models demonstrate that at its core crimmigration is not a system of outright social exclusion focused on the expulsion of undesirable migrants but rather one focused on the management classification and policing of domestic populations it is argued that under crimmigration regimes criminal law becomes instrumental in the facilitation of gradual assimilation by shifting immigration enforcement from the margins of the state to the daily supervision of territorially present migrants the book illustrates this point by focusing on three main themes crimmigration as domestication crimmigration as civic stratification and crimmigration as a mechanism coined by foucault as the apparatus of security and by deleuze as the society of control by exploring these themes the book offers a comprehensive framework for understanding the rise of crimmigration and the particular ways in which it targets resident migrants the book will be of interest to researchers and academics working in the areas of criminal law and criminology immigration law citizenship studies globalization studies border studies and critical refugee studies
