Of the Past, for the Future 2006-03-06

conservation is a core value for most archaeological societies it is highlighted in their codes of ethics statements of mission and governance in recognition of this the world archaeological congress with the Getty Conservation Institute and a consortium of other conservation organizations brought together scholars working throughout the globe to discuss vital issues that affect archaeological heritage today this volume presents the proceedings of the conservation theme at the congress held in Washington D C June 22-26 2003 among the topics discussed are innovative approaches to policy and management of archaeological sites finding common ground the role of stakeholders in decision making archaeology and tourism a viable partnership preserving the cultural heritage of Iraq and Afghanistan archaeology and conservation in China today and managing archaeological sites and rock art sites in Southern Africa these proceedings should do much to promote and strengthen the relationship between the disciplines of conservation and archaeology

Conservation Practices on Archaeological Excavations 2014-02-01

the relationship between archaeology and conservation has long been complex and at times challenging archaeologists are often seen as interested principally in excavation and research while conservators are concerned mainly with stabilization and the prevention of deterioration yet it is often initial conservation in the field that determines the long term survival and intelligibility of both moveable artifacts and fixed architectural features this user friendly guide to conservation practices on archaeological excavations covers both structures and artifacts starting from the moment when they are uncovered individual chapters discuss excavation and conservation environmental and soil issues deterioration identification and condition assessment detachment and removal initial cleaning coverings and shelters packing and documentation there are also eight appendixes geared primarily for professionals engaged in the physical practice of excavation this book will also interest archaeologists archaeological conservators site managers conservation scientists museum curators and students of archaeology and conservation

Elements of Archaeological Conservation 2003-07-13

clearly laid out and fully illustrated this is the only comprehensive book on the subject at an introductory level perfect as a practical reference book for professional and students who work with excavated materials and as an introduction for those training as archaeological conservators

Studies in Archaeological Conservation 2020-12-14

studies in archaeological conservation features a range of case studies that explore the techniques and approaches used in current conservation practice around the world and taken together provide a picture of present practice in some of the world leading museums and heritage organisations archaeological excavations produce thousands of corroded and degraded fragments of metal ceramic and organic material that are transformed by archaeological conservators into the beautiful and informative

objects that fill the cases of museums the knowledge and expertise required to undertake this transformation is demonstrated within this book in a series of 26 fascinating case studies in archaeological conservation and artefact investigation undertaken in laboratories around the world these case studies are contextualised by a detailed introductory chapter which explores the challenges presented by researching and conserving archaeological artefacts and details how the case studies illustrate the current state of the subject studies in archaeological conservation is the first book for over a quarter of a century to show the range and diversity of archaeological conservation in this case through a series of case studies as a result the book will be of great interest to practising conservators conservation students and archaeologists around the world

The Archaeologist's Manual for Conservation 2007-05-08

this is a foreword by an archaeologist not a conservator but as brad rodgers says conservation has been steadily pulled from archaeology by the forces of specialization p 3 and hewantstoremedy that situation through this manual he sees this work as a call to action for the non professional conservator permitting curators conservators and archaeologists to identify artifacts that need professional attention and allow these professionals to stabilize most artifacts in their own laboratories with minimal intervention using simple non toxic procedures p 5 it is the mission of brad s manual to bring conservation back into archaeology p 6 the degree of success of that goal depends on the degree to which archaeologists pay attention to and put to use what brad has to say because as he says the conservationist archaeologist is responsible to make preparation for an artifact s care even before it is excavated and after its storage into the foreseeable future a tremendous responsibility p 10 the manual is a combination of highly technical as well as common sense methods of conserving wood iron and other metals ceramics glass and stone organics and composites a far better guide to artifact conservation than was available to me when i first faced that archaeological challenge at colonial brunswick town north carolina in 1958 a challenge still being faced by archaeologists today the stage of conservation in 1958 is in dramatic contrast to the procedures brad describes in this manual conservation has indeed made great progress for instance a common procedure then was to heat the artifacts red hot in a furnace a method that made me cringe

A Conservation Manual for the Field Archaeologist 1994-12-31

conservation treatments and techniques for the archaeologist in the field emphasizing how to conserve an excavated object before it is taken to a trained conservator offsite safety procedures and conservation supplies and materials are recommended techniques for lifting cleaning consolidating marking and storing are discussed along with methods for treating specific artifact materials e g amber wood appendixes cover impressions and chemical preparations

Photography in Archaeology and Conservation 1994-09-29

in this revised and updated edition of his 1989 book peter dorrell provides a comprehensive guide to the uses of photography in archaeology drawing on thirty five years of experience he examines the use of photography in field archaeology in surveys

in archaeological laboratories and in conservation he offers a clear and well illustrated explanation of the techniques involved with sections on equipment and materials survey and site photography architectural photography the recording of different types of artifacts registration and storage the use of ultra violet and infra red and photography for publication he also covers the growing use of video and electronic recording systems

Conservation Archaeology 1977

in september 2008 a combined annual conference for the australasian institute for maritime archaeology the australasian society for historical archaeology and the australian association for maritime history was held at the magnificent institute building of the state library of south australia in adelaide the conference was entitled archaeology from below engaging the public and hoped to address the relationship between archaeology and the public papers presented in this session broaden discussions on the interactions of professionals and the public with respect to in situ stabilisation preservation and management of terrestrial and underwater cultural heritage sites and their associated archaeological finds

Public, Professionals and Preservation 2009

archaeological chemists and archaeological engineers have contributed the results of their recent researches in the fields of preservation and conservation an excellent guide for the professionals preservation of manuscripts art objects paper palm leaf birch bark etc dealt with will be very useful to archaeological chemists contemporary black lustrous ware and nbp ware have also been discussed

Studies in Art and Archaeological Conservation 2004

a collection of essays and reports examining key issues in conservation and management of archaeological sites it is divided into parts that focuses on historical methods concepts and issues conserving the archaeological resource physical conservation of archaeological sites the cultural values of archaeological sites and site management

Archaeological Sites 2012

supported by eurasia pacific uninet the second international conference on archaeology and conservation along the silk road was jointly organized by nanjing university china and institute of conservation university of applied arts vienna and held in may 2016 in china silk road showcases the trans continental cultural movements between europe and asia and this event encouraged researchers to reflect on popular as well as otherwise under represented topics this volume includes selected papers from the conference and merges aspects of archaeology with conservation subjects vary from field drawings unique local techniques spread of diseases and epidemics to dna studies assessing population migration and mixture next silk road conference is planned for 2018 to carry forward the initiative of learning and exchange of knowledge

Archaeology and Conservation along the Silk Road 2018-11-12

this volume collects 33 papers which reassess archaeological conservation the nature of the discipline and the directions in which it is evolving

The Conservation of Archaeological Materials 2010

over the past twenty years there has been a significant increase in underwater activities such as scuba diving which coupled with the adventure and romance always associated with shipwrecks has led to rapid developments in the discovery and excavation of shipwrecked material these shipwrecks are invaluable archaeological time capsules which in the majority of cases have come to an equilibrium with their environment as soon as artefacts on the wreck site are moved this equilibrium is disturbed and the artefacts may commence to deteriorate sometimes in a rapid and devastating fashion in fact excavation without having conservation facilities available is vandalism the artefacts are much safer being left on the sea bed such famous shipwrecks as the Mary Rose 1545 the *Wasa* 1628 and the *Batabia* 1629 have not only brought the world's attention to these unique finds but have also produced tremendous conservation problems the treatment of a 30 metre waterlogged wooden hull or large cast iron cannon is still causing headaches to conservators

Conservation in Field Archaeology 1970

over the years archaeologists have developed a number of techniques for conserving historical artifacts for future generations along with these techniques researchers have developed a series of ethical principles for treating materials in a way that allows them to be not only observed and analyzed for the present but also re-studied in the future conservation techniques used up to now however have provided artifacts only a limited lifespan and in some cases they do not work well with waterlogged materials within the past few years archaeological chemistry and concerns of longevity testing have become central issues in the development of conservation treatment strategies working with Dow Corning Corporation Texas A&M archaeological preservation research lab APRL and the conservation research lab CRL Smith and his colleagues in ASM's nautical archaeology program set out to develop a series of chemistries and techniques that would provide successful and affordable treatment strategies for organic materials in this ground-breaking description of the processes and materials that were developed Smith explains these techniques in ways that will allow museums and historical societies to conserve more stable artifacts for traveling exhibits and interactive displays and will allow researchers to conserve new discoveries without sacrificing important information beyond the advantages offered by polymer replacement passivation polymer technologies Smith considers a concept seldom addressed in conservation artistry variance in equipment relative humidity laboratory layout intended results and level of expertise all affect researchers' ability to obtain consistent and aesthetically correct samples and require a willingness to explore treatment parameters and combinations of polymers Smith prescribes an effective layout for day-to-day conservation of small organic artifacts and then examines some of the mechanical techniques used to process various organic materials from marine and land sites he concludes with an exploration of new tools and technologies that can help conservators devise more effective conservation strategies including CT scans and

computer aided design images and stereolithography all archaeologists conservators and museologists working with perishable artifacts will benefit from the careful explication of these new processes and those wishing to incorporate some or all of them will find the step by step instructions for doing so book jacket title summary field provided by blackwell north america inc all rights reserved

Photography in Archaeology and Conservation 1ed 1989-06-15

archaeological heritage conservation is all too often highly conflicted economic interests are often at the forefront of management decision making with heritage values given lesser if any consideration but when heritage places are managed with international principles in mind the sites stand out as evidencing superior outcomes

Conservation of Marine Archaeological Objects 2014-05-20

clearly laid out and fully illustrated this comprehensive introductory level book on the subject is perfect as a practical reference book for professional and students and an introduction for those training as archaeological conservators

Archaeological Conservation Using Polymers 2003

this publication commemorates the 50th anniversary of the conservation laboratory of the university of pennsylvania museum which is now part of the new center for the analysis of archaeological materials these papers were presented at an international symposium to celebrate the collaboration of conservators with allied professionals

Archaeological Heritage Conservation and Management 2019-01-31

in 1991 the mosque at ayodhya in india was demolished by hindu fundamentalists who claim that it stood on the birthplace of a legendary hindu hero during recent conflicts in former yugoslavia ethnic groups destroyed mosques and churches to eliminate evidence of long term settlement by other communities over successive centuries however a single building in cordoba functioned as a mosque a church and a synagogue the roman emperor diocletian s palace in split is occupied today by shops and residential apartments what circumstances have lead to the survival and reinterpretation of some monuments but the destruction of others this work asks whether the idea of world heritage is an essential mechanism for the protection of the world s cultural and natural heritage or whether it subjugates a diversity of cultural traditions to specifically western ideas how far is it acceptable for one group of people to comment upon or intercede in the way in which another community treats the remains which it claims as its own what are the responsibilities of multinational corporations and non governmental organisations operating in the developing world who actually owns the past the landowner indigenous people the state or humankind

The Elements of Archaeological Conservation 1990

archaeological sites around the world are threatened by forces including population growth development urbanization pollution tourism vandalism and looting site management planning is emerging as a critical element not only for the conservation of this heritage but also to address issues such as tourism and sustainable development this book reports on the proceedings of a workshop held in greece where an international group of professionals gathered to discuss challenges faced by archaeological sites in the mediterranean and to examine management planning methods that might generate effective conservation strategies

Conservation on Archaeological Excavations 1984

this special issue of public archaeology journal explores indigenous involvement in archaeological the wide range of areas where archaeological activities have implicaitons for indigenous concerns this publication addresses key concepts in the ongoing debate over access classification and use of ancient materials this publication includes contributions from a global mix of expert authors combining archaeologists and anthropologists with researchers and respresentatives of indigenous cultures selected contributions stem from research seminars which took place near the end of the united nations decade for indigenous people 1995 2004

Engaging Conservation 2018-01-25

caring for the past discusses the evolution philosophy and current practice of conservation it is intended to encourage a better understanding of what conservation involves and of how it can contribute to the study and enjoyment of the heritage issues affecting conservation and its future development are examined and illustrated with examples the principal focus of the book is on conservation of archaeological ethnographic and museum objects with reference to and comparison with conservation in other fields such as buildings and monuments and fine and decorative arts topics include the context and scope of conservation and its ethical and theoretical basis history of conservation meaning of objects and its effect on conservation change and deterioration in materials and objects issues in practice decision making conservation procedures working relations between conservators curators and scientists development of a conservation profession training in conservation communicating conservation and attracting public supportcaring for the past will be of value to those wishing to explore ideas about conservation of archaeological and museum objects including heritage or collections managers archaeologists museum curators conservators and materials scientists it will be particularly useful as a text for postgraduate courses in conservation museum studies and cultural heritage management

Destruction and Conservation of Cultural Property 2003-09-02

this book of its kind is being published in india for the first time here we have a book for those who are interested in the critical appreciation of the problems relating to conservation and preservation of monuments and antiquities including the

entire world heritage

Management Planning for Archaeological Sites 2002

archaeological heritage conservation is all too often highly conflicted economic interests are often at the forefront of management decision making with heritage values given lesser if any consideration but when heritage places are managed with international principles in mind the sites stand out as evidencing superior outcomes

Conservation, Identity and Ownership in Indigenous Archaeology 2005

is research in stone conservation on the rocks this volume part of the gci s research in conservation series offers an in depth critical appraisal of the status of stone conservation research today identifying areas of strength and weakness in the field as a whole c a price a noted british archaeological conservation scientist discusses recent research on the causes of stone decay as well as current preventive measures assessment tools and treatment durability he also reviews current research on methods of evaluating the effectiveness of these methodologies and treatments the book includes a comprehensive survey of the literature draws from conversations with professionals in the field and provides recommendations for increasing the effectiveness of research including the improvement of training symposia and research programs and the establishment of conservation policy

Conservation in Archaeology and the Applied Arts 1975

this book undertakes a comparative study of the history and development of legislative and administrative systems in operation today for the protection of archaeological monuments with the exception of scandinavia and the united kingdom no country adopted a positive policy towards the protection and conservation of its archaeological and historical heritage until the twentieth century moreover it was not until the middle of that century under the threat of wholesale devastation from extensive schemes for social and economic development that the accelerating disappearance of the sites and monuments of antiquity became the object of intensive study and legislation since then systems of cultural resource management have developed throughout the world a range of countries from europe america asia and africa representing a diversity of political and ideological systems capitalist socialist and ex colonial have been selected as being broadly representative of the variety of these systems the case studies have been written by distinguished archaeologists and provide critical evaluations of the objectives and shortcomings of these systems

Caring for the Past 2001

original research articles show the range of activities issues and solutions undertaken by contemporary managers of heritage sites around the world

Researches in Archaeology and Conservation 1999

one of the greatest challenges faced today by those responsible for ancient cultural sites is that of maintaining the delicate balance between conserving these fragile resources and making them available to increasing numbers of visitors. Tourism, unchecked development and changing environmental conditions threaten significant historical sites throughout the world. These issues are among the topics dealt with in this book which reports on the proceedings of an international conference on the conservation of classical sites in the Mediterranean region organized by the Getty Conservation Institute and the J. Paul Getty Museum. The book includes chapters discussing management issues at three sites: Piazza Armerina, Sicily; Knossos, Crete; and Ephesus, Turkey. While visiting these sites, conference participants examined how issues raised at these locales can illuminate the challenges of management and conservation faced by complex heritage sites the world over. Additional chapters discuss such topics as the management of cultural sites, the reconstruction of ancient buildings and ways of presenting and interpreting sites for today's visitors.

Archaeological Heritage Conservation and Management 2019-01-31

This book addresses physical, chemical and biological methods for the preservation of ancient artifacts. Advanced materials are required to preserve the Mediterranean Belt's historic, artistic and archaeological relics against weathering, pollution, natural risks and anthropogenic hazards. Based upon the 10th International Symposium on the Conservation of Monuments in the Mediterranean Basin, this book provides a forum for international engineers, architects, archaeologists, conservators, geologists, art historians and scientists in the fields of physics, chemistry and biology to discuss principles, methods and solutions for the preservation of global historical artifacts.

Art and Archaeology Technical Abstracts 1999

Despite growing international awareness of the presence and significance of ruined buildings and archaeological sites and the increasingly sophisticated technology available for the collection of data about them, these sites continue to be at risk across the globe. Conservation of ruins defines and describes these risks, which range from neglect to destructive archaeology and even well-meaning intervention in the name of tourism. The book provides detailed practical instruction on the conservation and stabilisation of ruins by structural and non-structural means, as well as describing the procedures and conditions that need to be in place to ensure the protection of our important historic sites. In considering aspects of architectural conservation, archaeology and ecology together for the first time, this book provides an integrated holistic view of this international topic that will be essential reading for those working in this field.

Research Objectives in Archaeological Conservation 1988

This substantial volume, the result of 2008 symposia in Copenhagen and Bologna, explores how field archaeology and site management can be more fully integrating with considerations of public access and conservation, taken having a greater role.

when archaeological research projects are designed 51 papers present case studies from a wide range of sites alongside more theoretical and methodological offerings

Stone Conservation 1996-09-05

heritage ecologies presents an ecological understanding of heritage that furthers a concern for how its making and unmaking always involves a wide range of human and other than human actors recognizing the entangled nature cultures of heritage is essential in the anthropocene era where uncertainty and rapid environmental change force us to recast common conceptions of inheritance and to envision new strategies for preservation heritage sites are meant to be open and shared spaces and a recurring argument in the cases presented here is that this openness inevitably also overrides our selections orders and appreciations through a diverse range of case studies the chapters collected in this book aim to explore the affects and memories engendered by diverse heritage ecologies where humans are neither the sole makers nor the only inheritors the common call is that the experiential perceptive and informational plenitude enabled through contributions of other than human actors is key to an ecological rethinking of heritage in the twenty first century heritage ecologies is unique in bringing heritage studies into closer proximity with a wide variety of non representational and object oriented theories and is an important volume for students and researchers in archaeology and heritage studies

***Approaches to the Archaeological Heritage* 2009-05-18**

exploring archaeology community engagement and cultural heritage protection in south asia this book considers heritage management strategies through community engagement bringing together the results of research undertaken by archaeologists heritage practitioners and policy makers working towards the preservation and conservation of both cultural and natural heritage the book highlights the challenges faced by communities archaeologists and heritage managers in post conflict and post disaster contexts in their efforts to protect preserve and present cultural heritage including issues of sustainability linkages with existing community programmes and institutions and building administrative and social networks the case studies illustrate larger scale projects to small micro level engagement across a range of geographical political social and economic contexts providing a framework that links and synchronises programmes of archaeological activities alongside active community engagement the chapters introduction community engagement in the greater lumbini area of nepal the micro heritage case study of dohani and conclusion of this book are available open access under a cc by 4 0 license at link.springer.com
