a respected physics professor and author breaks down the great debate over the big bang and the continuing quest to understand the fate of the universe today the big bang is so entrenched in our understanding of the cosmos that to doubt it would seem crazy but as paul halpern shows in flashes of creation just decades ago its mere mention caused sparks to fly at the center of the debate were russian american physicist george gamow and british astrophysicist fred hoyle gamow insisted that a fiery explosion explained how the elements of the universe were created attacking the idea as half baked hoyle countered that the universe was engaged in a never ending process of creation the battle was fierce in the end gamow turned out to be right mostly and hoyle along with his many achievements is remembered for giving the theory the silliest possible name the big bang halpern captures the brilliance of both thinkers and reminds us that even those proved wrong have much to teach us about boldness imagination and the universe itself
