morris n eagle explores the understanding and role of subjective experience in the disciplines of psychology psychoanalysis and philosophy of mind elaborating how different understandings of subjective experience give rise to very different theories of the nature of the mind eagle then explains how these shape clinical practices in particular eagle addresses the strong tendency in the disciplines concerned with the nature of the mind to overlook the centrality of subjective experience in one's life to view it with suspicion and to reduce it to neural processes describing examples of research in which subjective experience is a central variable eagle provides an outline of a model in which the dichotomy of conscious and unconscious is supplemented by subjective experience as a continuum this book is essential reading for psychoanalysts psychoanalytic psychotherapists psychologists and anyone wishing to gain a deeper understanding of the importance of theories of the mind to therapeutic practice
