this dissertation is a case study of a school district in the pacific northwest that developed three year high school science curricula using a physics first course sequence physics chemistry biology with the crosscutting concept patterns as the central theme of the courses the purpose of the study was to examine the impact of the implementation of the 9th grade course patterns physics on teacher practice and beliefs about science teaching and determine whether this new approach facilitated teacher classroom practices and beliefs congruent with those expressed in a framework for k 12 science education and the next generation science standards results from this study indicate that the implementation of patterns physics positively impacted teacher confidence in teaching the ngss science and engineering practices professional development that provided teachers multiple opportunities to engage with the curriculum in the role of a student in professional discussions with colleagues and over several years were critical to support a change in practice consistent with three dimensional 3d teaching called for by the framework and ngss teacher participants viewed the patterns pcb physics chemistry and biology sequence as an appropriate course sequence with strong agreement that a 9th grade physics course needs to be tailored to the needs of students such as added support for students with minimal mathematics skills the

ngss with an emphasis on 3d learning science content knowledge crosscutting concepts and science and engineering practices had a significant positive impact on instructional practice

this open access report explores the nature and extent of students misconceptions and misunderstandings related to core concepts in physics and mathematics and physics across grades four eight and 12 twenty years of data from the iea s trends in international mathematics and science study timss and timss advanced assessments are analyzed specifically for five countries italy norway russian federation slovenia and the united states who participated in all or almost all timss and timss advanced assessments between 1995 and 2015 the report focuses on students understandings related to gravitational force in physics and linear equations in mathematics it identifies some specific misconceptions errors and misunderstandings demonstrated by the timss advanced grade 12 students for these core concepts and shows how these can be traced back to poor foundational development of these concepts in earlier grades patterns in misconceptions and misunderstandings are reported by grade country and gender in addition specific misconceptions and misunderstandings are tracked over time using trend items administered in multiple assessment cycles the study and associated methodology may enable education systems to help identify specific needs in the curriculum improve inform instruction across grades and also raise possibilities for future timss assessment design and reporting that may provide more diagnostic outcomes
