## **nonparametric statistics wikipedia May 26 2024**

nonparametric statistics is a type of statistical analysis that makes minimal assumptions about the underlying distribution of the data being studied often these models are infinite dimensional rather than finite dimensional as is parametric statistics 1

an introduction to nonparametric statistics presents techniques for statistical analysis in the absence of strong assumptions about the distributions generating the data rank based and resampling techniques are heavily represented but robust techniques are considered as well

## **non parametric inference department of statistics Oct 19 2023**

nonparametric inference refers to statistical techniques that use data to infer unknown quantities of interest while making as few assumptions as possible typically this involves working with large and flexible infinite dimensional statistical models
