Clinical Safety and Efficacy Testing of Cosmetics 1989-11-27

a major goal of the us department of defense dod transformational medical technologies initiative tmti is to develop countermeasures that will protect military personnel against bioweapons including specific infectious disease agents and toxins an explicit tmti objective is to respond quickly to such threats by producing an appropriate amount of an effective countermeasure currently defined as enough material to treat or vaccinate 3 million personnel within 12 months of identification of a specific threat dod officials call for tmti programs to be up and running by 2014 the national academies hosted a workshop which brought together scientists from academe government and the biotechnology industry to identify and discuss challenges and ideas related to the tmti s vision of developing countermeasures within a few months after an agent is identified the workshop focused on manufacturing processes and specifically on the development of manufacturing platforms repeatable components of manufacturing that reduce both development time and risk an underlying assumption was that demonstrating that integrated platforms can reliably produce safe and efficacious countermeasures might shorten the regulatory approval process the workshop is summarized in this book

***Considerations for Ensuring Safety and Efficacy of Vaccines and Therapeutic Proteins Manufactured by Using Platform Approaches* 2010-07-09**

sets out detailed guidelines for conducting scientific research on the safety and efficacy of herbal medicines the guidelines which reflect the consensus reached by 17 experts in pharmacology biochemistry and traditional medicine respond to the need to assure the safety of widely used herbal medicines while also facilitating the search for new pharmaceutical products specific research criteria are covered together with general principles of investigation including ethical concerns the book has three parts the first discusses the special properties of herbal medicines that need to be considered when designing research protocols the second part provides detailed guidance on the objectives of research the contents of a research protocol and the methods of investigation for non clinical studies and for phase i to phase iv clinical trials the third part which forms the core of the book presents three sets of research guidelines for quality specifications of plant materials and preparations for pharmacodynamic and general pharmacological studies of herbal medicines and for toxicity investigation of herbal medicines topics covered range from the information required to establish the identity and quality of plant materials or preparations through the selection of appropriate test systems for pharmacodynamic studies to detailed advice on the many different tests examinations observations and experimental procedures required in experimental animals and controls to establish the safety of herbal medicines the guidelines are intended to facilitate the work of research scientists and clinicians while also furnishing some reference points for the governmental industrial and non profit organizations providing financial support

***Assessing the Efficacy and Safety of Medical Technologies* 1978**

safety and efficacy of radiopharmaceuticals are elements of great importance in nuclear medicine since the first meeting in 1965 in oak ridge with the title radiopharmaceuticals tremendous developments have taken place in 1965 the whole technetium 99m area was just in its very beginning safety and efficacy of the non radioactive pharmaceuticals have attracted great attention during the last 10 years and so have similar aspects of radiopharmaceuticals during the later years regulatory agencies are extending their work also to the preparation of radiopharmaceuticals at hospitals and to requirements for registration of radiopharmaceuticals in a fast developing field there might be tendencies to confrontation between interests and there have certainly been some tendencies to put undue restrictions on the use of radio pharmaceuticals due to the lack of understanding between the industry and the regulatory authorities and between regulatory authorities and hospitals much of this may have been due to lack of information and certainly is due to the lack of fundamental scientific knowledge in many radiopharmaceutical aspects a fast and safe introduction of new radio pharmaceuticals and the proper handling of these requires a lot of development work but also an understanding of how general principles from the non radioactive drug field may be sensibly transformed into the radiopharmaceutical area it may even require compromises between requirements for safety in different areas such as radiation protection and pharmaceutical aspects

Research Guidelines for Evaluating the Safety and Efficacy of Herbal Medicines 1993

regulatory agencies within the united states and the united kingdom among several other countries have reviewed extensively the safety and efficacy of halcion triazolam â a once commonly used hypnotic drug concerns began to emerge about the safety of halcion when a dutch physician reported a possible link between it and a syndrome that included such effects as depression amnesia hallucinations and increased anxiety in addition in 1991 its manufacturer upjohn noted that errors had been identified in a report of one of the clinical studies included in the original application for approval since then the drug has been removed from the market in several countries whereas in the united states and canada the drug s labeling has been modified to reduce the recommended dose and duration of treatment and to heighten awareness of possible side effects yet different data and analyses have resulted in conflicting messages that are difficult to reconcile and interpret in response to a request from the food and drug administration to resolve these controversial issues related to the safety and efficacy of halcion this iom book assesses the adequacy of the drug s clinical trials the quality and quantity of data on adverse reactions overall confidence in the data on effectiveness adverse events and side effects at different doses and whether additional studies are needed
