publisher description this is a new release of the original 1929 edition from the internet to networks of friendship disease transmission and even terrorism the concept and the reality of networks has come to pervade modern society but what exactly is a network what different types of networks are there why are they interesting and what can they tell us in recent years scientists from a range of fields including mathematics physics computer science sociology and biology have been pursuing these questions and building a new science of networks this book brings together for the first time a set of seminal articles representing research from across these disciplines it is an ideal sourcebook for the key research in this fast growing field the book is organized into four sections each preceded by an editors introduction summarizing its contents and general theme the first section sets the stage by discussing some of the historical antecedents of contemporary research in the area from there the book moves to the empirical side of the science of networks before turning to the foundational modeling ideas that have been the focus of much subsequent activity the book closes by taking the reader to the cutting edge of network science the relationship between network structure and system dynamics from network robustness to the spread of disease this section offers a potpourri of topics on this rapidly expanding frontier of the new science an in depth look at why american universities continue to favor u s focused social science research despite efforts to make scholarship more cosmopolitan u s research universities have long endeavored to be cosmopolitan places yet the disciplines of economics political science and sociology have remained stubbornly parochial despite decades of government and philanthropic investment in international scholarship the most prestigious academic departments still favor research and expertise on the united states why seeing the world answers this question by examining university research centers that focus on the middle east and related regional area studies drawing on candid interviews with scores of top scholars and university leaders to understand how international inquiry is perceived and valued inside the academy seeing the world explains how intense competition for tenure line appointments encourages faculty to pursue american projects that are most likely to garner professional advancement at the same time constrained by tight budgets at home university leaders eagerly court patrons and clients worldwide but have a hard time getting departmental faculty to join the program together these dynamics shape how scholarship about the rest of the world evolves at once a work and occupations study of scholarly disciplines an essay on the formal organization of knowledge and an inquiry into the fate of area studies seeing the world is a must read for anyone who cares about the future of knowledge in a global era twin rivers this pioneering venture featured townhouses and shared spaces for children s play and adult work and play in a society that stresses individual over collective goals and private over public concerns key essays on comparative literature from the eighteenth century to today as comparative literature reshapes itself in today s globalizing age it is essential for students and teachers to look deeply into the discipline s history and its present possibilities the princeton sourcebook in comparative literature is a wide ranging anthology of classic essays and important recent statements on the mission and methods of comparative literary studies this pioneering collection brings together thirty two pieces from foundational statements by herder madame de staël and nietzsche to work by a range of the most influential comparatists writing today including lawrence venuti gayatri chakravorty spivak and franco moretti gathered here are manifestos and counterarguments essays in definition and debates on method by scholars and critics from the united states europe asia africa and latin america giving a unique overview of comparative study in the words of some of its most important practitioners with selections extending from the beginning of comparative study through the years of intensive theoretical inquiry and on to contemporary discussions of the world s literatures the princeton sourcebook in comparative literature helps readers navigate a rapidly evolving discipline in a dramatically changing world a people centered approach to global health when people come first critically assesses the expanding field of global health it brings together an international and interdisciplinary group of scholars to address the medical social political and economic dimensions of the global health enterprise through vivid case studies and bold conceptual work the book demonstrates the crucial role of ethnography as an empirical lantern in global health arguing for a more comprehensive people centered approach topics include the limits of

technological quick fixes in disease control the moral economy of global health science the unexpected effects of massive treatment rollouts in resource poor contexts and how right to health activism coalesces with the increased influence of the pharmaceutical industry on health care the contributors explore the altered landscapes left behind after programs scale up break down or move on we learn that disease is really never just one thing technology delivery does not equate with care and biology and technology interact in ways we cannot always predict the most effective solutions may well be found in people themselves who consistently exceed the projections of experts and the medical scientific political and humanitarian frameworks in which they are cast when people come first sets a new research agenda in global health and social theory and challenges us to rethink the relationships between care rights health and economic futures how privileged adolescents in china acquire status and why this helps them succeed study gods offers a rare look at the ways privileged youth in china prepare themselves to join the ranks of the global elite yi lin chiang shows how these competitive chinese high schoolers first become study gods xueshen a term describing academically high performing students constant studying however is not what explains their success for these young people appear god like in their effortless abilities to excel instead chiang explores how elite adolescents achieve by absorbing and implementing the rules surrounding status drawing from eight years of fieldwork and extensive interviews chiang reveals the important lessons that chinese youth learn in their pursuit of elite status they understand the hierarchy of the status system recognizing and acquiring the characteristics that are prized while avoiding those that are not they maintain status by expecting differential treatment and performing status based behaviors which guide their daily interactions with peers teachers and parents lastly with the help of resourceful parents they rely on external assistance in the face of potential obstacles and failures chiang looks at how students hone these skills applying them as they head to colleges and careers around the world and in their relationships with colleagues and supervisors highlighting another facet of china s rising power study gods announces the arrival of a new generation to the realm of global competition over the past decade literary critic and editor jerome mcgann has developed a theory of textuality based in writing and production rather than in reading and interpretation these new essays extend his investigations of the instability of the physical text mcgann shows how every text enters the world under socio historical conditions that set the stage for a ceaseless process of textual development and mutation arguing that textuality is a matter of inscription and articulation he explores texts as material and social phenomena as particular kinds of acts mcgann links his study to contextual and institutional studies of literary works as they are generated over time by authors editors typographers book designers marketing planners and other publishing agents this enables him to examine issues of textual stability and instability in the arenas of textual production and reproduction drawing on literary examples from the past two centuries including works by byron blake morris yeats joyce and especially pound mcgann applies his theory to key problems facing anyone who studies texts and textuality the description for this book studies in the arts at sinai will be forthcoming this work is a powerful demonstration of how historical analysis can be brought to bear on the study of strategic issues and conversely how strategic thinking can help drive historical research based largely on newly released american archives history and strategy focuses on the twenty years following world war ii by bridging the sizable gap between the intellectual world of historians and that of strategists and political scientists the essays here present a fresh and unified view of how to explore international politics in the nuclear era the book begins with an overview of strategic thought in america from 1952 through 1966 and ends with a discussion of making sense of the nuclear age trachtenberg reevaluates the immediate causes of world war i studies the impact of the shifting nuclear balance on american strategy in the early 1950s examines the relationship between the nuclearization of nato and u s west european relations and looks at the berlin and the cuban crises he shows throughout that there are startling discoveries to be made about events that seem to have been thoroughly investigated investigating autobiographical writing of mary mccarthy henry james jean paul sartre saul friedlander and maxine hong kingston this book argues that autobiographical truth is not a fixed but an evolving content in a process of self creation further paul john eakin contends the self at the center of all autobiography is necessarily fictive professor eakin shows that the autobiographical impulse is simply a special form of reflexive consciousness from a developmental viewpoint the autobiographical act is a mode of self invention always practiced first in living and vastly increase access to the rich scholarly heritage found in the thousands of books published by princeton university press since its founding in 1905 this book examines how the practices of criticism establish a particular domain of knowledge the truth of literature as a discussion of the ideology and politics of literary knowledge it concentrates on constitutive elements of its production the intertextuality of writing the mediatedness of understanding the formative role of reading expectations the enabling presence of relevant literacy the conditioning horizon of expectations and the economic character of axiology the main argument advanced is that criticism by constructing literature as an ethnic heritage and communal treasure participated in the invention of a national identity necessary for the legitimization of the modern state case studies have been selected from the highly relevant area of contemporary greek criticism microscopic investigations of its dominant sites mechanisms and discourses reveal that the field emerged in response to concrete political needs and provided the state with a literary tradition as proof of its national composition purity continuity and autonomy the construction and canonization of texts as art works invariably employed as a measure of aesthetic and ultimately moral merit the greekness of the literary sign the book as a genealogical approach to the neglected national role of literature should be of interest to specialists in literary theory comparative literature greek studies and cultural studies originally published in 1988 the princeton legacy library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of princeton university press these editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions the goal of the princeton legacy library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by princeton university press since its founding in 1905 what percentage of graduate students entering phd programs in the arts and sciences at leading universities actually complete their studies how do completion rates vary by field of study scale of graduate program and type of financial support provided to students has the increasing reliance on teaching assistantships affected completion rates and time to degree how successful have national fellowship programs been in encouraging students to finish their studies in reasonably short periods of time what have been the effects of curricular developments and shifts in the state of the job market how has the overall system of graduate education been affected by the expansion of the 1960s and the subsequent contraction in enrollments and degrees conferred is there excess capacity in the system at the present time this major study seeks to answer fundamental questions of this kind it is based on an exhaustive analysis of an unparalleled data set consisting of the experiences in graduate school of more than 35 000 students who entered programs in english history political science economics mathematics and physics at ten leading universities between 1962 and 1986 in addition new information has been obtained on the graduate student careers

of more than 13 000 winners of prestigious national fellowships such as the woodrow wilson and the danforth it is the combination of these original data sets with other sources of national data that permits fresh insights into the processes and outcomes of graduate education the authors conclude that opportunities to achieve significant improvements in the organization and functioning of graduate programs exist especially in the humanities and related social sciences and the final part of the book contains their policy recommendations this will be the standard reference on graduate education for years to come and it should be read and studied by everyone concerned with the future of graduate education in the united states originally published in 1992 the princeton legacy library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of princeton university press these editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions the goal of the princeton legacy library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by princeton university press since its founding in 1905 the bodies and minds of children and the very space of children are under assault this is the message we receive from daily news headlines about violence sexual abuse exploitation and neglect of children and from a proliferation of books in recent years representing the domain of contemporary childhood as threatened invaded polluted and stolen by adults through a series of essays that explore the global dimensions of children at risk an international group of researchers and policymakers discuss the notion of children s rights and in particular the claim that every child has a right to a cultural identity explorations of children s situations in japan korea singapore south africa england norway the united states brazil and germany reveal how children s everyday lives and futures are often the stakes in contemporary battles that adults wage over definitions of cultural identity and state cultural policies throughout this volume the authors address the complex and often ambiguous implications of the concept of rights for example it may be used to defend indigenous children from radically assimilationist or even genocidal state policies but it may also be used to legitimate racist institutions a substantive introduction by the editor examines global political economic frameworks for the cultural debates affecting children and traces intriguing sometimes surprising threads throughout the papers in addition to the editor the contributors are norma field marilyn ivy mary john hae joang cho saya shiraishi vivienne wee pamela reynolds kathleen hall ruth mandel manuela carneiro da cunha and njabulo ndebele volume ii contains basic data underlying the study of the national balance sheet in the postwar period treats statistical problem structure and trends and application of the balance sheet approach originally published in 1963 the princeton legacy library texts of these important books while presenting them in durable paperback and hardcover editions the goal of the princeton legacy library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by princeton university press since its founding in 1905 agent based computational modeling is changing the face of social science in generative social science joshua epstein argues that this powerful novel technique permits the social sciences to meet a fundamentally new standard of explanation in which one grows the phenomenon of interest in an artificial society of interacting agents heterogeneous boundedly rational actors represented as mathematical or software objects after elaborating this notion of generative explanation in a pair of overarching foundational chapters epstein illustrates it with examples chosen from such far flung fields as archaeology civil conflict the evolution of norms epidemiology retirement economics spatial games and organizational adaptation in elegant chapter preludes he explains how these widely diverse modeling studies support his sweeping case for generative explanation this book represents a powerful consolidation of epstein s interdisciplinary research activities in the decade since the publication of his and robert axtell s landmark volume growing artificial societies beautifully illustrated generative social science includes a cd that contains animated movies of core model runs and programs allowing users to easily change assumptions and explore models making it an invaluable text for courses in modeling at all levels how professionalization and scholarly rigor made social scientists increasingly irrelevant to us national security policy to mobilize america s intellectual resources to meet the security challenges of the post 9 11 world us secretary of defense robert m gates observed that we must again embrace eggheads and ideas but the gap between national security policymakers and international relations scholars has become a chasm in cult of the irrelevant michael desch traces the history of the relationship between the beltway and the ivory tower from world war i to the present day recounting key golden age academic strategists such as thomas schelling and walt rostow desch s narrative shows that social science research became most oriented toward practical problem

solving during times of war and that scholars returned to less relevant work during peacetime social science disciplines like political science rewarded work that was methodologically sophisticated over scholarship that engaged with the messy realities of national security policy and academic culture increasingly turned away from the job of solving real world problems in the name of scientific objectivity academics today frequently engage only in basic research that they hope will somehow trickle down to policymakers drawing on the lessons of this history as well as a unique survey of current and former national security policymakers desch offers concrete recommendations for scholars who want to shape government work the result is a rich intellectual history and an essential wake up call to a field that has lost its way nine papers consider problems in american french and british history that range from economic history to political behavior and social structure originally found in the thousands of books published by princeton university press since its founding in 1905 the important data of economics are in the form of time series therefore the statistical methods used will have to be those designed for time series data new methods for analyzing series containing no trends have been developed by communication engineering and much recent research has been devoted to adapting and extending these methods so that they will be suitable for use with economic series this book presents the important results of this research and further advances the application of the recently developed theory of spectra to economics in particular professor hatanaka demonstrates the new technique in treating two problems business cycle indicators and the acceleration principle princeton university press since its founding in 1905 the institute for advanced study in essays and photos this beautifully illustrated anthology celebrates eighty years of history and intellectual inquiry at the institute for advanced study one of the world s leading centers for theoretical research featuring essays by current and former faculty and members along with photographs by serge j f levy the book captures the spirit of curiosity freedom and comradeship that is a hallmark of this unique community of scholars founded in 1930 in princeton new jersey the institute encourages and supports fundamental research in the sciences and humanities the original often speculative thinking that can transform how we understand our world albert einstein was among the first in a long line of brilliant thinkers to be affiliated with the institute they include kurt gödel george kennan j robert oppenheimer erwin panofsky homer a thompson john von neumann and hermann weyl this volume offers an intimate portrait in words and images of a storied institution that might best be described as a true academic village the personal reflections collected here written by leading figures from across the disciplines

bring this exceptional academic institution and its history vibrantly to life the contributors to this anthology are michael atiyah chantal david freeman dyson jane f fulcher peter goddard barbara kowalzig wolf lepenies paul moravec joan wallach scott and david h weinberg what turns rich nations into great powers how do wealthy countries begin extending their influence abroad these questions are vital to understanding one of the most important sources of instability in international politics the emergence of a new power in from wealth to power fareed zakaria seeks to answer these questions by examining the most puzzling case of a rising power in modern history that of the united states if rich nations routinely become great powers zakaria asks then how do we explain the strange inactivity of the united states in the late nineteenth century by 1885 the u s was the richest country in the world and yet by all military political and diplomatic measures it was a minor power to explain this discrepancy zakaria considers a wide variety of cases between 1865 and 1908 when the u s considered expanding its influence in such diverse places as canada the dominican republic and iceland consistent with the realist theory of international relations he argues that the president and his administration tried to increase the country s political influence abroad when they saw an increase in the nation s relative economic power but they frequently had to curtail their plans for expansion he shows because they lacked a strong central government that could harness that economic power for the purposes of foreign policy america was an unusual power a strong nation with a weak state it was not until late in the century when power shifted from states to the federal government and from the legislative to the executive branch that leaders in washington could mobilize the nation s resources for international influence zakaria s exploration of this tension between national power and state structure will change how we view the emergence of new powers and deepen our understanding of america s exceptional history the canal du midi which threads through southwestern france and links the atlantic to the mediterranean was an astonishing feat of seventeenth century engineering in fact it was technically impossible according to the standards of its day impossible engineering takes an insightful and entertaining look at the mystery of its success as well as the canal s surprising political significance the waterway was a marvel that connected modern state power to human control of nature just as surely as it linked the ocean to the sea the canal du midi is typically characterized as the achievement of pierre paul riquet a tax farmer and entrepreneur for the canal yet chandra mukerji argues that it was a product of collective intelligence depending on peasant women and artisans unrecognized heirs to roman traditions of engineering who came to labor on the waterway in collaboration with military and academic supervisors ironically while louis xiv and his treasury minister jean baptiste colbert used propaganda to present france as a new rome the canal du midi was being constructed with unrecognized classical methods still the result was politically potent as mukerji shows the project took land and power from local nobles using water itself as a silent agent of the state to disrupt traditions of local life that had served regional elites impossible engineering opens a surprising window into the world of seventeenth century france and illuminates a singular work of engineering undertaken to empower the state through technical conquest of nature a global history of the interwar period which posits a new history for the origins of the second world war haslam argues that it was not only the failures of the treaties that ended the first world war that led to the second rather fear of international communism hampered the great powers and prevented the necessary diplomatic steps to contain the aggression of germany and japan to a much greater extent and much earlier in history than previous scholarship has recognized

what percentage of graduate students entering phd programs in the arts and sciences at leading universities actually complete their studies how do completion rates vary by field of study scale of graduate program and type of financial support provided to students has the

increasing reliance on teaching assistantships affected completion rates and time to degree how successful have national fellowship programs been in encouraging students to finish their studies in reasonably short periods of time what have been the effects of curricular developments and shifts in the state of the job market how has the overall system of graduate education been affected by the expansion of the 1960s and the subsequent contraction in enrollments and degrees conferred is there excess capacity in the system at the present time this major study seeks to answer fundamental questions of this kind it is based on an exhaustive analysis of an unparalleled data set consisting of the experiences in graduate school of more than 35 000 students who entered programs in english history political science economics mathematics and physics at ten leading universities between 1962 and 1986 in addition new information has been obtained on the graduate student careers of more than 13 000 winners of prestigious national fellowships such as the woodrow wilson and the danforth it is the combination of these original data sets with other sources of national data that permits fresh insights into the processes and outcomes of graduate education the authors conclude that opportunities to achieve significant improvements in the organization and functioning of graduate programs exist especially in the humanities and related social sciences and the final part of the book contains their policy recommendations this will be the standard reference on graduate education for years to come and it should be read and studied by everyone concerned with the future of graduate education in the united states originally published in 1992 the princeton legacy library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of princeton university press these editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions the goal of the princeton legacy library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by princeton university press since its founding in 1905

the bodies and minds of children and the very space of children are under assault this is the message we receive from daily news headlines about violence sexual abuse exploitation and neglect of children and from a proliferation of books in recent years representing the domain of contemporary childhood as threatened invaded polluted and stolen by adults through a series of essays that explore the global dimensions of children at risk an international group of researchers and policymakers discuss the notion of children s rights and in particular the claim that every child has a right to a cultural identity explorations of children s situations in japan korea singapore south africa england norway the united states brazil and germany reveal how children s everyday lives and futures are often the stakes in contemporary battles that adults wage over definitions of cultural identity and state cultural policies throughout this volume the authors address the complex and often ambiguous implications of the concept of rights for example it may be used to defend indigenous children from radically assimilationist or even genocidal state policies but it may also be used to legitimate racist institutions a substantive introduction by the editor examines global political economic frameworks for the cultural debates affecting children and traces intriguing sometimes surprising threads throughout the papers in addition to the editor the contributors are norma field marilyn ivy mary john hae joang cho saya shiraishi vivienne wee pamela reynolds kathleen hall ruth mandel manuela carneiro da cunha and njabulo ndebele

agent based computational modeling is changing the face of social science in generative social science joshua epstein argues that this powerful novel technique permits the social sciences to meet a fundamentally new standard of explanation in which one grows the phenomenon of interest in an artificial society of interacting agents heterogeneous boundedly rational actors represented as mathematical or software objects after elaborating this notion of generative explanation in a pair of overarching foundational chapters epstein illustrates it with examples chosen from such far flung fields as archaeology civil conflict the evolution of norms epidemiology retirement economics spatial games and organizational adaptation in elegant chapter preludes he explains how these widely diverse modeling studies support his sweeping case for generative explanation this book represents a powerful consolidation of epstein s interdisciplinary research activities in the decade since the publication of his and robert axtell s landmark volume growing artificial societies beautifully illustrated generative social science includes a cd that contains animated movies of core model runs and programs allowing users to easily change assumptions and explore models making it an invaluable text for courses in modeling at all levels

how professionalization and scholarly rigor made social scientists increasingly irrelevant to us national security policy to mobilize america s intellectual resources to meet the security challenges of the post 9 11 world us secretary of defense robert m gates observed that we must again embrace eggheads and ideas but the gap between national security policymakers and international relations scholars has become a chasm in cult of the irrelevant michael desch traces the history of the relationship between the beltway and the ivory tower from world war i to the present day recounting key golden age academic strategists such as thomas schelling and walt rostow desch s narrative shows that social science research became most oriented toward practical problem solving during times of war and that scholars returned to less relevant work during peacetime social science disciplines like political science rewarded work that was methodologically sophisticated over scholarship that engaged with the messy realities of national security policy and academic culture increasingly turned away from the job of solving real world problems in the name of scientific objectivity academics today frequently engage only in basic research that they hope will somehow trickle down to policymakers drawing on the lessons of this history as well as a unique survey of current and former national security policymakers desch offers concrete recommendations for scholars who want to shape government work the result is a rich intellectual history and an essential wake up call to a field that has lost its way

what turns rich nations into great powers how do wealthy countries begin extending their influence abroad these questions are vital to understanding one of the most important sources of instability in international politics the emergence of a new power in from wealth to power fareed zakaria seeks to answer these questions by examining the most puzzling case of a rising power in modern history that of the united states if rich nations routinely become great powers zakaria asks then how do we explain the strange inactivity of the united states in the late nineteenth century by 1885 the u s was the richest country in the world and yet by all military political and diplomatic measures it was a minor power to explain this discrepancy zakaria considers a wide variety of cases between 1865 and 1908 when the u s considered expanding its influence in such diverse places as canada the dominican republic and iceland consistent with the realist theory of international relations he argues that the president and his administration tried to increase the country's political influence abroad when they saw an increase in the nation's relative economic power but they frequently had to curtail their plans for expansion he shows because they lacked a strong central government that could harness that economic power for the purposes of foreign policy america was an unusual power a strong nation with a weak state it was not until late in the century when power shifted from states to the federal government and from the legislative to the executive branch that leaders in washington could mobilize the nation's resources for international influence zakaria's exploration of this tension between national power and state structure will change how we view the emergence of new powers and deepen our understanding of america's exceptional history

the canal du midi which threads through southwestern france and links the atlantic to the mediterranean was an astonishing feat of

seventeenth century engineering in fact it was technically impossible according to the standards of its day impossible engineering takes an insightful and entertaining look at the mystery of its success as well as the canal s surprising political significance the waterway was a marvel that connected modern state power to human control of nature just as surely as it linked the ocean to the sea the canal du midi is typically characterized as the achievement of pierre paul riquet a tax farmer and entrepreneur for the canal yet chandra mukerji argues that it was a product of collective intelligence depending on peasant women and artisans unrecognized heirs to roman traditions of engineering who came to labor on the waterway in collaboration with military and academic supervisors ironically while louis xiv and his treasury minister jean baptiste colbert used propaganda to present france as a new rome the canal du midi was being constructed with unrecognized classical methods still the result was politically potent as mukerji shows the project took land and power from local nobles using water itself as a silent agent of the state to disrupt traditions of local life that had served regional elites impossible engineering opens a surprising window into the world of seventeenth century france and illuminates a singular work of engineering undertaken to empower the state through technical conquest of nature
