Ethical and Policy Issues in International Research: Commissioned papers and staff analysis 2001

first published in 1995 surface analysis of paper examines surface analysis techniques from a paper industry perspective and places heavy emphasis on applications modern techniques including ion mass spectrometry infrared spectroscopy and optical profilometry are reviewed in a straightforward manner this new book provides details on widely used methods and instruments and discusses how they can be used to attain for example contour maps of the microscopic constituents on paper surfaces and accurate analyses of the physical properties of paper organized into three sections surface analysis of paper provides thorough coverage of the physical characteristics of paper and a clear picture of new and emerging analytical methods carefully chosen background material on fundamental concepts is included wherever such material assists in understanding the uses of analysis methods each chapter contains an

introduction a description of the technique a discussion of the type of information that can be obtained with the particular technique practical examples to demonstrate the advantages of the technique

1 2 given that competitor analysis is an essential component of corporate strategy porter 1980 argued that most firms do not conduct this type of analysis systematically enough rather a lot of firms operate on what he calls informal impressions conjectures and intuition gained through the

tidbits of information about competitors every manager continually receives as a result traditional environmental scanning places many firms at risk of dangerous competitive blind spots due to lack of robust competitor analysis to rectify this situation iam wirting this working paper to make easy for students to study and understand

accounting for fatigue loadings has been a concern ever since the widespread introduction of metallic materials into load bearing components in the nineteenth century calculations were developed based on the analysis capabilities of their time incorporating all the latest technologies of their era at the time that technology was pencil and paper calculations today s calculations are computer based the widespread use of computing methods has greatly enhanced the analyst abilities for simulating internal stress and strain fields unfortunately current fatigue analyses often force fit current stress field calculations into fatigue analysis methods meant for nineteenth century stress calculation methods it s never a

good idea to force methods optimized for pre computer calculations to work with computers this text presents a more integrated approach to computer based fatigue analysis methods like what was originally done the latest technologies are applied rather than force fitting computer computational capabilities into nineteenth century techniques holistic approaches incorporating all knowledge have long been established as the most successful approach to problem solving incorporating all knowledge with the most modern capabilities is the preferred approach holistic methods strive to reduce subjective inputs and replace them with consistent objective ones this text aims to transition disjointed inefficient analyses into a unified computer based holistic technique by introducing a fatigue analysis method specifically developed for computer simulations ultimately for any method or theory to be valuable it must be put into practice and prove itself that entails leadership decision making engineering design development activities will lead to final decisions information in a holistic approach must include the reliability of the information how consistent are the predictions are the two types of potential scatter analytic and physical properly addressed is analytic scatter minimized while maintaining creativity is physical scatter totally understood effective program management requires knowledge on both types of scatter and most importantly the ability to realize the difference a novel computer based unified approach to fatigue methods is presented which incorporates a holistic approach for more accurate and consistent analyses including the management and leadership of fatigue analysis projects minimization of analytic scatter management of physical scatter and

observations plus recipes it has been said that science is the orderly collection of facts about the natural world scientists however are wary of using the word fact fact has the feeling of absoluteness and universality whereas scientific

observations are neither absolute nor universal for example children have 20 deciduous baby teeth is an observation about the real world but scientists would not call it a fact some children have fewer deciduous teeth and some have more even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood when they are babies and toddlers children have less than 20 visible teeth and as they grow older children begin to lose their deciduous teeth which are then replaced by permanent teeth children have 20 deciduous baby teeth is not even a complete scientific statement for one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth when we say teeth do we mean only those that can be seen with the unaided eye or do we also include the hidden unerupted teeth an observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a scientific statement until its terms are explained scientifically children have 20 deciduous teeth must be accompanied by definitions and qualifiers
