the riveting story of the exploration of the final frontier of our planet the deep ocean and history making mission to reach the bottom of all five seas humankind has explored every continent on earth climbed its tallest mountains and gone into space but the largest areas of our planet remain largely a mystery the deep oceans at over 36 000 feet deep there areas closest to earth s core have remained nearly impossible to reach until now technological innovations engineering breakthroughs and the derring do of a team of explorers led by explorer victor vescovo brought together an audacious global quest to dive to the deepest points of all five oceans for the first time in history the expedition pushed technology to the limits mapped hidden landscapes discover previously unknown life forms and began to piece together how life in the deep oceans effects our planet but it was far from easy expedition deep ocean is the inside story of this exploration of one of the most unforgiving and mysterious places on our planet including the site of the titanic wreck and the little understood hadal zone vescovo and his team would design the most advanced deep diving submersible ever built where the pressure on the sub is 8 tons per square inch the equivalent of having 292 fueled and fully loaded 747s stacked on top of it and then there were hurricane laden ocean waters and the byzantine web of global oceanography politics expedition deep ocean reveals the marvelous and other worldly life found in all five deep ocean trenches including several new species that have posed as of yet unanswered questions

about survival and migration from ocean to ocean then there are the newly discovered sea mounts that cause tsunamis when they are broken by shifting subduction plates and jammed back into the earth crust something that can now be studied to predict future disasters filled with high drama adventure and the thrill of discovery expedition deep ocean celebrates courage and ingenuity and reveals the majesty and meaning of the deep ocean

a fascinating and unique look at these celebrated expeditions ed stafford knows all too well how important an explorer s kit can be and this brilliant book gives great insight into the role it plays sir ranulph fiennes in this unique and enthralling book explorer and survivalist ed stafford curates 25 great expeditions through the lens of the kit these remarkable explorers took with them in an environment where lack of preparation could mean certain death the equipment carried ridden and sailed into uncharted territories could mean the success or failure of an expedition was it simply a case of better provisions and preparation that helped amundsen beat scott to the south pole and how has the equipment taken to everest changed since hillary s first ascent through carefully curated photographs and specially commissioned illustrations we can see at a glance the scale style and complexity of the items taken into the unknown by the greatest explorers of all time and the impact each item had on their journey how it potentially saved a life or was purely for comfort or entertainment and how these objects of survival have evolved and adapted as science advances and we plunge further into the extremes conquering fears and mountains adversity and wild jungles each item these explorers flew pulled or hauled played a

crucial role in their ambitious and dangerous missions to find out a little more about our world through each of these objects we can gain a better understanding ourselves get an intimate view of these and more amazing expeditions roald amundsen race to the pole norwegian expedition snowshoes primus stove piano violin gramophone amelia earhart first woman to fly solo across the atlantic ocean bendix radio direction finder parachutes emergency life raft rouge tim slessor first overland from london to singapore machetes crowbar typewriter remington dry shaver tea nellie bly around the world in 72 days mumm champagne accordion silk waterproof wrap dark gloves

rebecca priestley longs to be in antarctica but it is also the last place on earth she wants to go in 2011 priestley visits the wide white continent for the first time on a trip that coincides with the centenary of robert falcon scott s fateful trek to the south pole for priestley 2011 is the fulfilment of a dream

that took root in a childhood full of books art and science and grew stronger during her time as a geology student in the 1980s she is to travel south twice more spending time with antarctic scientists including paleo climatologists biologists geologists glaciologists exploring the landscape marvelling at wildlife from orca to tardigrades and occasionally getting very cold a constant companion for priestley is her anxiety both the kind that is brought on by flying to the bottom of the world in a military aeroplane and the kind that clouds our thoughts of how our world will be for our children writing against the backdrop of trump s america extreme weather events and scientists projections for earth s climate she grapples with the truths we need to tell ourselves as we stand on a tightrope between hope for the planet and catastrophic change fifteen million years in antarctica offers a deeply personal tour of a place in which a person can feel like an outsider in more ways than one with generosity and candour priestley reflects on what antarctica can tell us about earth s future and asks do people even belong in this fragile otherworldly place

for most people planet earth s icy parts remain out of sight and out of mind yet it is the melting of ice that will both raise sea level and warm the climate further by reducing the white surfaces that reflect solar energy back into space in effect our icy places act as the world s refrigerator helping to keep our climate relatively cool the icy planet lays out carbon dioxide s role as the control knob of our climate over the past 1000 million years then

explores what is happening to ice and snow in antarctica the arctic and the high mountains colin p summerhayes takes readers to the world s icy places to see what is happening to its ice snow and permafrost he recounts tales from his own visits to these frozen landscapes shining a light on some of the wonders he has encountered in his travels he also brings together pieces of the climate story from different scientific disciplines and from the past and the present to illustrate how earth s climate system works utilizing geological records of climate change alongside new technologies in ice coring summerhayes crafts a detailed and compelling record of earth s climate history and examines how that can be used as a window into our future
