Perl

2009-03

Perl is a high-level, general-purpose programming language. It is designed for text processing and system administration. Perl is often used for web programming, system administration, and network programming. It is a multi-paradigm programming language, supporting procedural, object-oriented, and functional programming. Perl is known for its flexibility and its ability to integrate with other languages and systems.

Perl is a multi-paradigm programming language, supporting procedural, object-oriented, and functional programming. It is known for its flexibility and its ability to integrate with other languages and systems.
