Theorizing Discrimination in an Era of Contested Prejudice 2009-08-15 despite several decades of attention there is still no consensus on the effects of racial or sexual discrimination in the united states in this landmark work the well

known sociologist samuel lucas shows how discrimination is not simply an action that one person performs in relation to another individual but something far more insidious a pervasive dynamic that permeates the environment in which we live and work challenging existing literature on the subject lucas makes a clear distinction between prejudice and discrimination he maintains that when an era of condoned exploitation ended the era of contested prejudice as he terms it began he argues that the great strides made in the 1950s and 1960s repudiated prejudice but not discrimination drawing on critical race theory feminist theory and a critique of dominant perspectives in the social sciences and law lucas offers a new understanding of racial and sexual discrimination that can guide our actions and laws into a more just future

Basketball 1929 in response to public demand federal legislation now requires testing of most students in the united states in reading and mathematics in grades three through eight many educators parents and policymakers who have paid little attention to testing policy issues in the past need to have better information on the topic than has generally been available kill the messenger now in paperback fills this gap this is perhaps the most thorough and authoritative work in defense of educational testing ever written Phelps points out that much research conducted by education insiders on the topic is based on ideological preference or profound self interest it is not surprising that they arrive at emphatically anti testing conclusions much if not most of this hostile research is passed on to the public by journalists as if it were neutral objective and independent kill the messenger explains and refutes many of the common criticisms of testing describes testing opponents strategies through case studies of texas and the sat illustrates the profound media bias against testing acknowledges testing s limitations and suggests how it can be improved and finally outlines the consequences of losing the war on standardized testing

Foundations of Psychological Testing 2007 philosophy long sought to set knowledge on a firm foundation through derivation of indubitable truths by infallible rules for want of such truths and rules the enterprise foundered nevertheless foundationalism s heirs continue their forbears quest seeking security against epistemic misfortune while their detractors typically espouse unbridled coherentism or facile relativism maintaining that neither stance is tenable catherine elgin devises a via media between the absolute and the arbitrary reconceiving the nature goals and methods of epistemology in considered judgment she argues for a reconception that takes reflective equilibrium as the standard of rational acceptability a system of thought is in reflective equilibrium when its components are reasonable in light of one another and the account they comprise is reasonable in light of our antecedent convictions about the subject it concerns many

epistemologists now concede that certainty is a chimerical goal but they continue to accept the traditional conception of epistemology s problematic elgin suggests that in abandoning the quest for certainty we gain opportunities for a broader epistemological purview one that comprehends the arts and does justice to the sciences she contends that metaphor fiction emotion and exemplification often advance understanding in science as well as in art the range of epistemology is broader and more variegated than is usually recognized tenable systems of thought are neither absolute nor arbitrary although they afford no guarantees they are good in the way of belief
