1886

this paper examines inflation dynamics in chile during the last peso depreciation episode 2013 15 the evidence is for substantial pass through effects to inflation given the large and persistent depreciation movement widespread indexation practices in non traded goods markets are found to amplify the inflation response to the depreciation while the role of wage indexation is less relevant to the inflation dynamics overall inflation would have remained within the central bank s target band absent the peso depreciation the analysis also shows that tightening monetary policy in response to a depreciation shock can be costly in terms of output the response of activity to rates is found to be strong while the transmission from activity to inflation is found to be weak simulations under uncertainty about the extent of the pass through also suggest that monetary policy can play a countercyclical role in the face of depreciation shocks at a moderate inflationary cost as long as inflation expectations remain anchored

first published in 1981 this book concerns itself with the different ways in which money is used the relationships which then arise and the institutions concerned in maintaining its various functions thomas crump examines the emergence of institutions with familiar and distinctive monetary roles the state the market and the banking system however other uses of money such as for gambling or the payment of fines are also taken into account in an exhaustive encyclopedic treatment of the subject which extends far beyond the range of conventional treatises on money

The Federal Reporter

1889

computational methods in reactor shielding deals with the mathematical processes involved in how to effectively control the dangerous effect of nuclear radiation reactor shielding is considered an important aspect in the operation of reactor systems to ensure the safety of personnel and others that can be directly or indirectly affected composed of seven chapters the book discusses ionizing radiation and how it aids in the control and containment of radioactive substances that are considered harmful to all living things the text also outlines the necessary radiation quantities and units that are needed for a systemic control of shielding and presents an

examination of the main sources of nuclear radiation a discussion of the gamma photon cross sections and an introduction to bmix a computer program used in illustrating a technique in identifying the gamma ray build up factor for a reactor shield are added the selection also discusses various mathematical representations and areas of shielding theory that are being used in radiation shielding the book is of great value to those involved in the development and implementation of systems to minimize and control the dangerous and lethal effect of radiation
