this and its companion volume 2 comprise the proceedings of the international symposium on solution behavior of surfactants theoretical and applied aspects organized under the auspices of the 11th northeast regional meeting of the american chemical society held in potsdam n y june 30 july 3 1980 this symposium represented the third event in the series of symposia dealing with the topic of surfactants in solution the first symposium was held in albany n y in 1976 under the title micellization solubilization and microemulsions 1 the proceedings of which have been documented in a two volume set the second was held under the title solution chemistry of surfactants in 1978 in knoxville tn and the proceedings of this event have also been properly chronicled apropos the fourth biennial symposium in this series is entitled international symposium on surfactants in solution k l mittal and b lindman cochairmen and is scheduled to be held from june 27 to july 2 1982 in lund sweden since these biennial events have been very successful and important in bringing researchers with varied interests together and in stimulating interdisciplinary communication so the plans are to continue these on a regular basis with a change in venue for each meeting

this book deals with the general topic numerical solution of partial differential equations pdes with a focus on adaptivity of discretizations in space and time by and large introductory textbooks like numerical analysis in modern scientific computing by deuffhard and hohmann should suffice as a prerequisite the emphasis lies on elliptic and parabolic systems hyperbolic conservation laws are treated only on an elementary level excluding turbulence numerical analysis is clearly understood as part of scientific computing the focus is on the efficiency of algorithms i e speed reliability and robustness which directly leads to the concept of adaptivity in algorithms the theoretical derivation and analysis is kept as elementary as possible nevertheless required somewhat more sophisticated mathematical theory is summarized in comprehensive form in an appendix complex relations are explained by numerous figures and illustrating examples non trivial problems from regenerative energy nanotechnology surgery and physiology are inserted the text will appeal to graduate students and researchers on the job in mathematics science and technology conceptually it has been written as a textbook including exercises and a software list but at the same time it should be well suited for self study

this and its companion volumes 8 9 and 10 document the proceedings of the 6th international symposium on surfactants in solution held in new delhi india august 18 22 1986 under the joint auspices of the indian society for surface science and technology and indian institute of technology delhi as this symposium was a landmark it represented the tenth anniversary of this series of symposia so it is very apropos to reflect on how these symposia have evolved to their present size and status the pedigree of this series of symposia goes back to 1976 when the premier symposium in this series was held actually in 1976 it was a modest start and it was not possible at that time to gaze at the crystal ball and predict what would be the state of affairs in 1986 for historical purposes it should be recorded here that the first symposium was held in albany ny under the title micellization solubilization and microemulsions the second symposium was christened solution chemistry of surfactants and was held in knoxville tn in 1978 the venue for the third symposium in 1980 was potsdam ny and it was dubbed international symposium on solution behavior of surfactants theoretical and applied aspects

surfactants have been used for many industrial processes such as flotation enhanced oil recovery soil remediation and cleansing flotation technology itself has been used in industry since the end of the 19th century and even today it is an important method for mineral processing and its application range is expanding to other areas this technology has been used in the treatment of wastewater industrial waste materials separation and recycling of municipal waste and some unit processes of chemical engineering the efficiency of all these operations depends primarily on the interactions among surfactants solids and media in this book the fundamentals

of solution chemistry of mineral surfactant systems are discussed as well as the important calculations involved the influence of relevant physico chemical conditions are also presented in detail introduces the fundamentals of solution chemistry of mineral surfactant systems and important calculations involved discusses the influence of relevant physico chemical conditions presents the relationship between the molecular structure of the flotation reagents of solution chemistry and its characteristics

the book starts with an exposition of the relevant properties of ions and continues with a description of their solvation in the gas phase the book contains a large amount of factual information in the form of extensive tables of critically examined data and illustrations of the points made throughout it covers the relevant properties of prospective liquid solvents for the ions the process of the transfer of ions from the gas phase into a liquid where they are solvated various aspects of the

solutions of the ions such as structural and transport ones and the effects of the ions on the solvent dynamics and structure what happens in cases where the solvent is a mixture selective solvation takes place applications of the concepts expounded previously in fields such as electrochemistry hydrometallurgy separation chemistry biophysics and synthetic methods
