methods of excavating in the greenland ice cap and the planning required equipment employed and problems encountered are described individually for each of 5 operating seasons 1955 1959 and relative cost evaluations of the different methods are given three basic methods were used hand picking and manual haulage explosives and manual haulage drill blast muck cycle and mechanized mining and haulage manual methods which are of low capacity and limited to widths under 12 ft are justified only when small openings are required and in remote inaccessible regions the drill blast muck cycle of mining has a slightly higher capacity than manual methods but requires power to operate the drills and to ventilate after blasting explosives can be used for room spans not exceeding 12 ft when greater spans are excavated by blasting the resulting roof is unstable the machine method using mechanized coal mining equipment has the highest capacity and the lowest unit cost openings with roof spans in excess of 36 ft have been made with coal mining machines without dangerous roof conditions developing

once she was falling in love with him but now she hates him fbi special agent oliver foxx lied to lark lawson lied used seduced and betrayed her four ultimate sins the special agent got close to lark just so that he could prove her twin brother was guilty of murder correction multiple murders the deceitful special agent believed that her brother was a serial killer and now because she let the wrong man get close lark s brother is rotting in a jail cell her fault but she s going to fix things or die trying though she d really really prefer not to die it s up to lark to prove her brother s innocence lark knows her brother isn t guilty he is the only family she has left and she is not about to watch him go down for crimes he never committed so now she s determined to hunt down the real killer no one seems to believe that she s up to the task but when danger begins to stalk her it s clear that lark has attracted someone s attention to a deadly degree she also has an annoying special agent suddenly shadowing her every move oliver never planned to get emotionally involved with the passionate and too lovely lark but his best laid plans went straight to hell when she entered his world oliver is used to profiling killers he doesn t know how to win back the only woman who has ever touched his heart especially when he broke hers but when it becomes apparent that lark is in the crosshairs of a dangerous killer there is no way that oliver can stand on the sidelines he played dirty before and he ll do it again losing lark isn t an option winning her back convincing her to love him again and most importantly keeping her alive absolutely on oliver s agenda he will do whatever it takes to keep her safe the hunt for a killer has never

been more personal for him and the desire he feels for lark never been stronger he doesn't just want her he's obsessed with getting her back but someone else is obsessed too and time may be running out for lark the ice breakers are ready to solve another cold case but things will get blazing hot for lark and oliver desire deception danger you just can't trust anyone these days and lark is about to discover that the world around her is full of lies love and hate sometimes it can be hard to tell the difference between these two emotions just like it can be hard to tell the difference between the guilty and the innocent

## **Investigations of Sea Ice Anisotropy, Electromagnetic Properties, Strength, and Under-ice Current Orientation 1980**

follows marine photographer bill curtsinger as he dives under the ice at antarctica to learn about the plants and animals that thrive in this extreme habitat

## **Life Under Ice 2003**

since the early 1970s experts have recognized that petroleum pollutants were being discharged in marine waters worldwide from oil spills vessel operations and land based sources public attention to oil spills has forced improvements still a considerable amount of oil is discharged yearly into sensitive

coastal environments oil in the sea provides the best available estimate of oil pollutant discharge into marine waters including an evaluation of the methods for assessing petroleum load and a discussion about the concerns these loads represent featuring close up looks at the exxon valdez spill and other notable events the book identifies important research questions and makes recommendations for better analysis of and more effective measures against pollutant discharge the book discusses input where the discharges come from including the role of two stroke engines used on recreational craft behavior or fate how oil is affected by processes such as evaporation as it moves through the marine environment effects what we know about the effects of petroleum hydrocarbons on marine organisms and ecosystems providing a needed update on a problem of international importance this book will be of interest to energy policy makers industry officials and managers engineers and researchers and advocates for the marine environment

join kathy conlan a marine biologist on a chilling visit to the coldest places on earth

## **City Under Ice 2017-06-29**

this book treats not only wilkins s nautilus expedition of 1931 but the diesel and battery powered submarine operations of the 1940s and 1950s as well as the era of nuclear powered boats it shows how rapid advances in

science and technology helped overcome so many obstacles that today the arctic ocean is considered the submariner's private sea. author marion williams, a member of the u.s. navy's submarine service for many years, tells the story from the viewpoint of the submariners themselves. to do so, he consulted countless official and unofficial documents and recently declassified reports, interviewed participants, and drew on his own professional knowledge. he provides dramatic details of every operation and also describes the military and political ramifications of each cruise. the narrative is certain to appeal to readers of all ages who enjoy tales of exploration and discovery. dozens of photographs, many never before published, help bring the story to life. book jacket title summary field provided by blackwell north america inc. all rights reserved.

## **Trapped Under Ice 1995**

cleo publications in frontiers in marine science foreword josef aschbacher director of esa's earth observation programmes satellite data have drastically changed the view we have of the oceans covering about 70% of earth's surface. oceans play a unique role for our planet and for our life, but large areas remain unexplored and are difficult to reach. since the 1980s, earth-orbiting satellites have helped to observe what is happening at the ocean surface. sensors like czcs, avhrr, seawifs, and modis provided the first ocean colour data from space, starting in 2002. esa's medium-resolution imaging spectrometer meris, on board the environmental satellite envisat, provided detailed information on phytoplankton biomass and concentrations of other

matter in the global oceans these satellite observations laid the groundwork for studying the marine environment and how it responds to climate change and the research community has since delivered information on the variability of marine ecosystems part of this work is reflected in this stunning collection of peer reviewed publications presented at the workshop colour and light in the ocean from earth observation cleo held at esa s esrin site in frascati italy on 6 8 september 2016 the event attracted more than 160 participants from all over the world including remote sensing experts marine ecosystem modelers in situ observers and users of earth observation data scientifically the meeting covered applications in climate studies over primary productivity and ocean dynamics to pools of carbon and phytoplankton diversity at global and regional scales it also demonstrated the potential of earth observation and its contribution to modern oceanography looking to the future new satellites developed by esa under the coordination of the european commission will further our scientific and operational observations of the seas with sentinel 3a in orbit and its twin sentinel 3b following in 2017 there is a new category of data available for operational oceanographic applications and climate studies for years to come these data are free and easy to access by anyone interested looking at the role of oceans in our daily lives i am sure that this collection of scientific excellence will be valued by scientists of today and will inspire the next generation to carry these ideas into the future

the specialized jargon of some sports can be quite esoteric non americans for example are likely puzzled by baseball terms such as bunt cut off man and safety squeeze while the non british may pause over cricket s chinaman doosra golden duck off break popping crease and yorker this new dictionary gives the definitions of more than 8 000 terms used in sports and games from around the world including mainstream sports like basketball and billiards alongside the more obscure netball and snooker entries cover sports equipment strategies venues qualifying categories awards and administrative bodies while a comprehensive system of cross references offers assistance and clarification when needed an appendix lists standard abbreviations of sports ruling bodies and administrative organizations

## **Under the Ice 2002**

this book attempts to provide readers with an overall idea of various types of offshore platform geometries it covers the various environmental loads encountered by these structures a detailed description of the fundamentals of structural dynamics in a class room style estimate of damping in offshore structures and their applications in the preliminary analysis and design basic concepts of structural dynamics are emphasized through simple illustrative examples and exercises design methodologies and guidelines which are form based concepts are explained through a few applied example structures each chapter also has tutorials and exercises for self learning a

dedicated chapter on stochastic dynamics will help the students to extend the basic concepts of structural dynamics to this advanced domain of research hydrodynamic response of offshore structures with perforated members is one of the recent research applications which is found to be one of the effective manner of retrofitting offshore structures results of recent research validated by the experimental and numerical studies are presented to update of the readers integration of the concepts of structural dynamics with the form evolved design of offshore structures is a unique approach used in this book the book will prove useful to the practicing and consulting offshore structural engineers as also to students and researchers working in the field

## ***Submarines Under Ice 1998***

are we alone in the universe how did life arise on our planet how do we search for life beyond earth these profound questions excite and intrigue broad cross sections of science and society answering these questions is the province of the emerging strongly interdisciplinary field of astrobiology life is inextricably tied to the formation chemistry and evolution of its host world and multidisciplinary studies of solar system worlds can provide key insights into processes that govern planetary habitability informing the search for life in our solar system and beyond planetary astrobiology brings together current knowledge across astronomy biology geology physics chemistry and related fields and considers the synergies between studies of solar systems and exoplanets to identify the path needed to advance the exploration of these profound questions planetary astrobiology represents the combined

efforts of more than seventy five international experts consolidated into twenty chapters and provides an accessible interdisciplinary gateway for new students and seasoned researchers who wish to learn more about this expanding field readers are brought to the frontiers of knowledge in astrobiology via results from the exploration of our own solar system and exoplanetary systems the overarching goal of planetary astrobiology is to enhance and broaden the development of an interdisciplinary approach across the astrobiology planetary science and exoplanet communities enabling a new era of comparative planetology that encompasses conditions and processes for the emergence evolution and detection of life

the fishery sector is important from indian economy view point as it contributes a source of income to a number of fishermen and has huge export potential the systems and technology used in aquaculture has developed

rapidly in the last fifty years they vary from very simple facilities like family ponds for domestic consumption in tropical countries to high technology systems like intensive closed systems for export production much of the technology used in aquaculture is relatively simple often based on small modifications that improve the growth and survival rates of the target species nowadays the fish and fisheries industry is one of the fastest growing international commodity markets globally guaranteeing an adequate supply to this international market requires hundreds of thousands of fishing vessels and fish farms as well as tens of thousands of fish processing workers wholesalers and retailers in countries spread all over the world the fishery sector thus generates employment and income for millions of people and in one of the major fields to venture a wide range of aspects of fresh water aquaculture such as selection of species of fish and shellfish construction and preparation of various types of fish ponds control of aquatic weeds and predators production of seed fish and their transportation fish nutrition and fish diseases and their control pertaining to composite fish culture air breathing fish culture etc have been dealt with a length for easy adoption the major contents of the book are classification of fishes general characters of fishes techniques in fish identification cold water fisheries of india physical and chemical properties of fishery water chemical constituents of fish economic importance of fishes fish in relation to human health construction of fish farms etc in this book you can find all the basic information required on the fundamental aspects of the fisheries and aquaculture technology with detailed information of their applications a wide variety of industrial processes etc the book is very useful for research scholars technocrats institutional libraries and entrepreneurs who want to

enter into the field of aquaculture technology

## **A Dictionary of the English Language 1892**

the book is an up to date basic reference for natural gas hydrate ngh in the arctic ocean geographical geological environmental energy new technology and regulatory matters are discussed the book should be of interest to general readers and scientists and students as well as industry and government agencies concerned with energy and ocean management ngh is a solid crystalline material that compresses gas by about a factor of about 164 during crystallization from natural gas mainly methane rich pore waters over time ngh displaces water and may form large concentrations in sediment pore space its formation introduces changes in the geotechnical character of host sediment that allows it to be distinguished by seismic and electric exploration methods the chemical reaction that forms ngh from gas and water molecules is highly reversible which allows controlled conversion of the ngh

to its constituent gas and water this can be achieved rapidly by one of a number of processes including heating depressurization inhibitor injection dissolution and molecular replacement the produced gas has the potential to make nagh a valuable unconventional natural gas resource and perhaps the largest on earth estimates for nagh distribution concentration economic targets and volumes in the arctic ocean have been carried out by restricting the economic target to deepwater turbidite sands which are also sediment hosts for more deeply buried conventional hydrocarbon deposits resource base estimates are based on nagh petroleum system analysis approach using industry standard parameters along with analogs from three relatively well known examples nankai japan gulf of mexico united states and arctic permafrost hydrate drilling data has substantiated new geotechnical level seismic analysis techniques for estimating not just the presence of nagh but prospect volumes in addition to a volumetric estimate for nagh having economic potential a sedimentary depositional model is proposed to aid exploration in the five different regions around the deep central arctic ocean basin related topics are also discussed transport and logistics for nagh may also be applicable for stranded conventional gas and oil deposits arising from a discussion of new technology and methodologies that could be applied to developing nagh suggestions are made for the lowering of exploration and capital expenses that could make nagh competitive on a produced cost basis the basis for the extraordinarily low environmental risk for exploration and production of nagh is discussed especially with respect to the environmentally fragile arctic region it is suggested that because of the low environmental risk special regulations could be written that would provide a framework for very low cost and safe development
