in recent years scholars and practitioners have increasingly recognized that human resource management hrm has paid insufficient attention to the impact of context while research has been devoted to examining the impact of national context on hrm systems this literature has been largely separate from that focused on other levels of context affecting organizational choices in hrm strategies such as the impact of the organizational environment industry sector occupation or workforce characteristics in

addition research has tended to consider elements of context in isolation rather than considering its impact at different levels the goal of the oxford handbook of contextual approaches to human resource management is to provide a more holistic approach to developing a contextual understanding of hrm this handbook offers a comprehensive understanding of the influence of contextual characteristics on the design and implementation of hrm systems rather than focusing on a single level or approach to examining context the handbook provides both conceptual and empirical analyses of different elements of context using a range of different lenses and measures in order to explore the influence of contextual factors at multiple levels the volume assembles a range of detailed accounts of how context affects the design implementation and impact of hrm activities

this edition of the world economic and social survey contributes to the debate on the implementation challenges of the 2030 agenda for sustainable development in addressing the specific challenge of building resilience to climate change the survey focuses attention on the population groups and communities that are disproportionately affected by climate hazards it argues that in the absence of transformative policies which coherently address the economic social and environmental dimensions of development building climate resilience will remain elusive and poverty and inequalities will worsen to

the extent that the differential impact of climate hazards on people and communities is determined largely by the prevalence of multiple inequalities in respect of the access to resources and opportunities policies aimed at building climate resilience provide an opportunity to address the structural determinants of poverty and inequality in their multiple dimensions
