Nutrient Control Actions for Improving series 3

Water Quality in the Mississippi River Basin and Northern Gulf of Mexico

2009-08-13

a large area of coastal waters in the northern gulf of mexico experiences seasonal conditions of low levels of dissolved oxygen a condition known as hypoxia excess discharge of nutrients into the gulf of mexico from the mississippi and atchafalaya rivers causes nutrient overenrichment in the gulf s coastal waters and stimulates the growth of large algae blooms when these algae die the process of decomposition depletes dissolved oxygen from the water column and creates hypoxic conditions in considering how to implement provisions of the clean water act to strengthen nutrient reduction objectives across the mississippi river basin the u s environmental protection agency epa requested advice from the national research council this book represents the results of the committee s investigations and deliberations and recommends that the epa and u s department of agriculture should jointly establish a nutrient control implementation initiative to learn more about the effectiveness of actions meant to improve water quality throughout the mississippi river basin and into the northern gulf of mexico other recommendations include how to move forward on the larger process of allocating nutrient loading caps which entails delegating responsibilities for reducing nutrient pollutants such as nitrogen and phosphorus across the basin

biographies of scientists carry an increasingly prominent role in today's publishing climate traditional historical and sociological accounts of science are complemented by narratives that emphasize the importance of the scientific subject in the production of science not least is the realization that the role of science in culture is much more accessible when presented through the lives of its practitioners taken as a genre such biographies play an important role in the public understanding of science in recent years there has been an increasing number of monographs and collections about biography in general and literary biography in particular however biographies of scientists engineers and medical doctors have rarely been the topic of scholarly inquiry as such this volume of essays will be welcomed by those interested in the genre of science biography and who wish to re-examine its history foundational problems and theoretical implications borrowing approaches and methods from cultural studies and the history philosophy and sociology of science the contributions cover a broad range of subjects periods and locations by presenting such a rich diversity of essays the volume is able to chart the reoccurring conceptual problems and devices that have influenced scientific biographies from classical antiquity to the present day in so doing it provides a compelling overview of the history of the genre suggesting that the different valuations given scientific biography over time have been largely fuelled by vested professional interests
