excerpt from modern carpentry and building giving methods of obtaining the various cuts in carpentry fourteen years ago the modern carpenters companion and builders guide was issued and has since met with a sale of ten thousand copies which considering the fact that it has been advertised but very little indeed shows that it met a want some complaint has been made that the illustrations did not always come opposite the descriptions and many have expressed a desire for a much larger number of floor plans of modern residences accompanied by elevations or perspectives to show the general style of exterior finish others wanted complete framing plans and specifications for many reasons it has been deemed best to remodel and add to this book thus bringing it up to date and meeting most

of the above mentioned requirements and to distinguish this revised book from the former one it has been decided to call it modern carpentry and building it must not be inferred that this is a thorough complete and exhaustive work on carpentry dealing with framing odd shaped structures groined arches and the like about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
