Textbook of Nursing Management and Leadership - E-Book 2023-12-04 an investigation of the logical flexibility principles needed for a formal semantic account of coordination plurality and scope in natural language since the early work of montague boolean semantics and its subfield of generalized quantifier theory have become the model theoretic foundation for the study of meaning in natural languages this book uses this framework to develop a new semantic theory of central linguistic phenomena involving coordination plurality and scope the proposed theory makes use of the standard boolean interpretation of conjunction a choice function account of indefinites and a novel semantics of plurals that is not based on the distributive collective distinction the key to unifying these mechanisms is a version of montagovian semantics that is augmented by flexibility principles semantic operations that have no counterpart in phonology this is the first book to cover these areas in a way that is both

linguistically comprehensive and formally explicit on one hand it addresses questions of primarily linguistic concern the semantic functions of words like and and or in different languages the interpretation of indefinites and their scope and the semantic typology of noun phrases and predicates on the other hand it addresses formal questions that are motivated by the treatment of these linguistic problems the use of boolean algebras in linguistics the proper formalization of choice functions within generalized quantifier theory and the extension of this theory to the domain of plurality while primarily intended for readers with a background in theoretical linguistics the book will also be of interest to researchers and advanced students in logic computational linguistics philosophy of language and artificial intelligence

**The Data Book** 2017-07-12 andrea bottani massimiliano carrara pierdaniele giarretta what do we do when we do metaphysics the aim of this introduction is to give a provisional answer to this question and then to explain the subtitle of the volume it is easy to observe that when we do meta physics we engage in a linguistic activity mainly consisting of uttering declarative sentences that are not very clear to most people that is true but of course it is not very informative what do we speak of when we do

metaphysics a traditional answer could be we speak of what things really are so suggesting that things can appear in a way that is different from the way they really are so understood meta physics is about the sense or the senses of real being a question that immediately arises is whether the sense of being is unique or is different for different types of things another question is whether it is possible that something could appear to be but really not be modern analytic metaphysicians usually answer that the sense of being is unique while acknowledging that there are different kinds of things and that to say that something could appear to be but really not be is a plain contradiction unless what is understood is that it could appear to us that there is something having such and such features but viii individuals essence and identity really there is no such a thing
