driven by several factors there are a lot of mumps applications in the commercial world quietly performing their day to day responsibilities in a reliable and scalable way and the above factors mean they aren t going away soon on the contrary enlightened developers are realising that there are new and exciting ways now available for extending the capabilities and reach of these legacy applications modern web based mumps applications are capable of being at the very leading edge in terms of their functionality ui design performance and scalability it is a very exciting time to be a mumps developer all of this means two things 1 we urgently need a new generation of mumps developers to take over the support maintenance and extension of those applications 2 there s a lot of work available for young developers who are willing to learn about mumps mike s book is a new and modern guide for anyone wanting to find out about this fascinating language and database to which i ve been
