moment of inertia 15 ul university of limerick download only details robustness stability and performance of evolutionary algorithms in dynamic environments this book presents the proceedings of the 11th iftomm international conference on rotordynamics held in beijing china on 18 21 september for those new to 8020 the letter s in the product name just indicates the surface type smooth or grooved so we are really comparing the regular profile 1515 to the lite 1515 l and ultra lite 1515 ul profiles if the moment of inertia of a rigid body about an axis through its center of mass is given by I_{cm} then the moment of inertia around an axis parallel to the original axis and separated from it by a distance d is given by $I = I_{cm} + m d^2$ label result where m is the object s mass to facilitate determination of the actual mass moment of inertia of a given propeller the following diagram shows
