real understanding of past societies is not possible without including children and yet they have been strangely invisible in the archaeological record compelling explanation about past societies cannot be achieved without including and investigating children and childhood however marginal the traces of children's bodies and bricolage may seem compared to adults archaeological evidence of children and childhood can be found in the most astonishing places and spaces the archaeology of childhood is one of the most exciting and challenging areas for new discovery about past societies children are part of every human society but childhood is a cultural construct each society develops its own idea about what a childhood should be what children can or should do and how they are trained to take their place in the world children also play a part in creating the archaeological record itself in this volume experts from around the world ask questions about childhood thresholds of age and growth childhood in the material culture the death of children and the intersection of the childhood and the social economic religious and political worlds of societies in the past

warfare in the 21st century is far different than warfare throughout the 19th and 20th centuries conventional warfare was about kinetic force and bending an adversary by might and strength skills valued were those related to mastery of weapons and placing ordnance on target courage and valor were defined by conflict militaries were distinct from the population and occupation was an enduring stage of war contemporary warfare besides continuing to be an exercise in military strength is composed of missions that depend on skills to forge interpersonal relationships and build sustainable partnerships with a host of actors that once had no voice or role in conflict's duration or conclusion today final victory does not conclude directly from conflict in fact victory may be subsumed into the larger and more consuming equation of international stability twenty first century warfare is about counterinsurgency and counter terrorism through an array of strategies that foster collusion and collaboration not acquiescence cross cultural competence 3c is a suite of competencies and enablers that have been identified as critical to instill in expeditionary military and civilian personnel in the department of defense dod defined as a set of knowledge skills abilities and attitudes ksaas 3c promotes effective interaction across cultural divides through exchanging ideas and meaning across cultures facilitating effective cross cultural interactions to develop and sustain relationships and providing a means to discern meaning from foreign and culturally different behavior 3c permeates dod policy doctrine strategy and operations and is now being institutionalized in dod military and civilian education and training cross cultural competence for a twenty first century military culture the flipside of coin is a volume edited by two acknowledged experts on 3c in military learning policy and research and explores the value and necessity of 3c to developing 21st century warfighters this volume features chapters by the editors and a host of multidisciplinary experts that probes all aspects of 3c from concept to application the message carried throughout cross cultural competence for a 21st century military is that contemporary and future security endeavors will be successful because winning wars ultimately rest on developing and sustaining cross cultural relationships as much as it does on weapons and force

biologically active small molecules have increasingly been applied in plant biology to dissect and understand biological systems this is evident from the frequent use of potent and selective inhibitors of enzymes or other biological processes such as transcription translation or protein degradation in contrast to animal systems which are nurtured from drug research the systematic development of novel bioactive small molecules as research tools for plant systems is a largely underexplored research area this is surprising since bioactive small molecules bear great potential for generating new powerful tools for dissecting diverse biological processes in particular when small molecules are integrated into genetic strategies thereby defining chemical genetics they may help to circumvent inherent problems of classical forward genetics there are now clear examples of important fundamental discoveries originating from plant chemical genetics that demonstrate the power but not yet fully exploited potential of this experimental approach these include the unraveling of molecular mechanisms and critical steps in hormone signaling activation of defense reactions and dynamic intracellular processes the intention of this research topic of frontiers in plant physiology is to summarize the current status of research at the interface between chemistry and biology and to identify future research challenges the research topic covers diverse

aspects of plant chemical biology including the identification of bioactive small molecules through screening processes from chemical libraries and natural sources which rely on robust and quantitative high throughput bioassays the critical evaluation and characterization of the compound s activity selectivity and ultimately the identification of its protein target s and mode of action which is yet the biggest challenge of all such well characterized selective chemicals are attractive tools for basic research allowing the functional dissection of plant signaling processes or for applied purposes if designed for protection of crop plants from disease new methods and data mining tools for assessing the bioactivity profile of compounds exploring the chemical space for structure function relationships and comprehensive chemical fingerprinting metabolomics are also important strategies in plant chemical biology in addition there is a continuing need for diverse target specific bioprobes that help profiling enzymatic activities or selectively label protein complexes or cellular compartments to achieve these goals and to add suitable probes and methods to the experimental toolbox plant biologists need to closely cooperate with synthetic chemists the development of such tailored chemicals that beyond application in basic research can modify traits of crop plants or target specific classes of weeds or pests by collaboration of applied and academic research groups may provide a bright future for plant chemical biology the current research topic covers the breadth of the field by presenting original research articles methods papers reviews perspectives and opinions
