Engineering Mathematics

1986

this volume is primarily intended for the undergraduate students of all disciplines of engineering of various indian universities this well organised text deals with complex variable analysis contour integration the theorems of cauchy riemann morera maclaurin laurent and many more that help students acquire a solid foundation in the basic skills it also discusses probability theory binomial and poisson distributions variance and time series that make the students comprehend the concepts and problems with ease finally it explains the numerical methods for differentiation and integration numerical solutions to ordinary differential equations using single and multi step numerical methods in an easy to understand style that creates the interest in the subject key features introductions to all chapters to understand the topic more clearly numerous solved examples with illustrations to enhance the skills end of chapter exercises to drill the students in self study objective type questions that sharpen the brain and help in proper understanding of the topic in depth

Engineering Mathematics Vol-II (Tamil Nadu)

2006

this book entitled probability random variables and random processes is mainly designed to meet the requirements of the new syllabus of anna university for electronics and communication engineering course of fourth semester however this will suit the syllabi of other universities also as our other books on engineering mathematics have been well received and appreciated by the students and the faculty not only throughout tamilnadu but also in other parts of the country for the last two decades we were inspired to bring out this book

ENGINEERING MATHEMATICS VOLUME I.

2016

the existing third volume of our series of textbooks on engineering mathematics for students of b e b tech b sc applied science has been now split into two volumes to caters to the needs of the syllabus semester wise this volume caters to the syllabus of fourth semester many worked examples are added in each chapter and a large number of problems are included in the exercises

Engineering Mathematics : Volume Ii

2011

this book on numerical methods actually this is in continuation to other three volumes of our book text book on engineering mathematics for b e course which cater to the needs of the first and the second year students the present book is to meet the requirements of the students of the fifth semester the need of which was being felt very anxiously in the treatment we have tried to maintain the same style as used in the other three volumes all the topics have been covered comprehensively but with clarity in lucid and easy way to grasp there is a good number of fully solved examples with exercises to be worked out at the end of each chapter

ENGINEERING MATHEMATICS

2011-07-01

this book highlights the latest advances in engineering mathematics with a main focus on the mathematical models structures concepts problems and computational methods and algorithms most relevant for applications in modern technologies and engineering in particular it features mathematical methods and models of applied analysis probability theory differential equations tensor analysis and computational modelling used in applications to important problems concerning electromagnetics antenna technologies fluid dynamics material and continuum physics and financial engineering the individual chapters cover both theory and applications and include a wealth of figures schemes algorithms tables and results of data analysis and simulation presenting new methods and results reviews of cutting edge research and open problems for future research they equip readers to develop new mathematical methods and concepts of their own and to further compare and analyse the methods and results discussed the book consists of contributed chapters covering research developed as a result of a focused international seminar series on mathematics and applied mathematics and a series of three focused international research workshops on engineering mathematics organised by the research environment in mathematics and applied mathematics at mälardalen university from autumn 2014 to autumn 2015 the international workshop on engineering mathematics for electromagnetics and health technology the international workshop on engineering mathematics algebra analysis and electromagnetics and the 1st swedish estonian international workshop on engineering mathematics algebra analysis and applications it serves as a source of inspiration for a broad spectrum of researchers and research students in applied

mathematics as well as in the areas of applications of mathematics considered in the book

Engg. Mathematics-First Year

2008

the vedas are considered divine in origin and are assumed to be revelations from god in traditional hinduism the vedas were to be learnt only by the upper caste hindus the lower castes sudras and so called untouchables who were outside the hindu social order were forbidden from even hearing to its recitation in recent years there have been claims that the vedas contain the cure to aids and the production of electricity here the authors probe into vedic mathematics that gained renown during the revivalist hindutva rule in india and was introduced into school syllabus in several states and explore if it is really vedic in origin or mathematics in content to gain a better understanding of its imposition we interviewed students teachers parents educationists and activists we analyze this problem using models like fuzzy cognitive maps fcm fuzzy relational maps frm and newly constructed fuzzy dynamical system and their neutrosophic analogues the issue of imposition of vedic mathematics into the school curriculum involves religious politics caste supremacy apart from elementary arithmetic so we use fuzzy and neutrosophic techniques to gain acute insight into how students have been affected because of this politically motivated syllabus revision

Engineering Mathematics

2005-12-01

owing to climate change related uncertainties and anticipated population growth different parts of the developing and the developed world particularly urban areas are experiencing water shortages or flooding and security of fit for purpose supplies is becoming a major issue the emphasis on decentralized alternative water supply systems has increased considerably most of the information on such systems is either scattered or focuses on large scale reuse with little consideration given to decentralized small to medium scale systems alternative water supply systems brings together recent research into the available and innovative options and additionally shares experiences from a wide range of contexts from both developed and developing countries alternative water supply systems covers technical social financial and institutional aspects associated with decentralized alternative water supply systems these include systems for greywater recycling rainwater harvesting recovery of water through condensation and sewer mining a number of case studies from the uk the

challenges to democracy
in india

usa australia and the developing world are presented to discuss associated environmental and health implications the book provides insights into a range of aspects associated with alternative water supply systems and an evidence base through case studies on potential water savings and trade offs the information organized in the book is aimed at facilitating wider uptake of context specific alternatives at a decentralized scale mainly in urban areas this book is a key reference for postgraduate level students and researchers interested in environmental engineering water resources management urban planning and resource efficiency water demand management building service engineering and sustainable architecture it provides practical insights for water professionals such as systems designers operators and decision makers responsible for planning and delivering sustainable water management in urban areas through the implementation of decentralized water recycling authors fayyaz ali memon centre for water systems university of exeter uk and sarah ward centre for water systems university of exeter uk

Probability, Random Variables & Random Proc

2006

in a world of chaotic alignments traditional logic with its strict boundaries of truth and falsity has not imbued itself with the capability of reflecting the reality despite various attempts to reorient logic there has remained an essential need for an alternative system that could infuse into itself a representation of the real world out of this need arose the system of neutrosophy the philosophy of neutralities introduced by florentin smarandache and its connected logic neutrosophic logic which is a further generalization of the theory of fuzzy logic in this book we study the concepts of fuzzy cognitive maps fcms and their neutrosophic analogue the neutrosophic cognitive maps ncms fuzzy cognitive maps are fuzzy structures that strongly resemble neural networks and they have powerful and far reaching consequences as a mathematical tool for modeling complex systems neutrosophic cognitive maps are generalizations of fcms and their unique feature is the ability to handle indeterminacy in relations between two concepts thereby bringing greater sensitivity into the results some of the varied applications of fcms and ncms which has been explained by us in this book include modeling of supervisory systems design of hybrid models for complex systems mobile robots and in intimate technology such as office plants analysis of business performance assessment formalism debate and legal rules creating metabolic and regulatory network models traffic and transportation problems medical diagnostics simulation of strategic planning process in intelligent systems specific language impairment web mining inference application child labor problem industrial

relations between employer and employee maximizing production and profit decision support in intelligent intrusion detection system hyper knowledge representation in strategy formation female infanticide depression in terminally ill patients and finally in the theory of community mobilization and women empowerment relative to the aids epidemic

Vedic Mathematics, 'Vedic' or 'Mathematics': A Fuzzy & Neutrosophic Analysis

2006-12

this edited volume presents applications and modelling as a world renowned sub field of research in mathematics education it includes the discussion on students development of modelling competency through the teaching of applications and modelling the teaching of mathematical modelling is considered from different perspectives such as mathematical pedagogical didactical perspectives and critical societal or socio political perspectives assessment practices local regional or international of modelling activities and difficulties with modelling activities at school and university levels respectively

are discussed use of technology and other resources in modelling activities and their impact on the modelling processes are included in the considerations teaching practices teacher education and professional development programs concerning the integration of applications and modelling in school and university mathematics programs are developed in this context

Indian Books in Print

2003

in this paper we for the first time develop define and describe a new class of algebraic codes using neutrosophic quadruples which uses the notion of known value and three unknown triplets $t\ i\ f$ where t is the truth value i is the indeterminate and f is the false value

Alternative Water Supply Systems

2014-10-15

the book in its present form is due to my interaction with the students for quite a long time it had been my long cherished desire to write a book covering most of the topics that form the syllabi of the engineering and science students at the degree level many students although able to understand the various topics of the books may not be able to put their knowledge to use for this purpose a number of questions and problems are given at the end of each chapter

International Books in Print

1998

this seventh volume of collected papers includes 70 papers comprising 974 pages on theoretic and applied neutrosophics written between 2013 2021 by the author alone or in collaboration with the following 122 co authors from 22 countries mohamed abdel basset abdel nasser hussian c alexander mumtaz ali yaman akbulut amir abdullah amira s ashour assia bakali kousik bhattacharya kainat bibi r n boyd Ümit budak lulu cai cenap Özel chang su kim victor christianto chunlai du chunxin bo rituparna chutia cu nguyen giap dao the son vinayak devvrat arindam dey partha pratim dey fahad alsharari feng yongfei s ganesan shivam ghildiyal bibhas c giri masooma raza hashmi ahmed refaat hawas hoang viet long le hoang son hongbo wang hongnian yu mihaiela iliescu saeid jafari temitope gbolahan jaiyeola naeem jan r jeevitha jun ye anup khan madad khan salma khan ilanthenral kandasamy w b vasantha kandasamy darjan karabašević kifayat ullah kishore kumar p k sujit kumar de prasun kumar nayak malayalan lathamaheswari luong thi hong

Fuzzy Cognitive Maps and Neutrosophic Cognitive Maps

2003-01-01

in this book the authors introduce for the first time the mod natural subset semigroups they enjoy very many special properties they are only semigroups even under addition this book provides several open problems to the semigroup theorists

Neutrosophic Sets and Systems, vol. 8/2015

2022-01-15

in this book authors for the first time introduce new mathematical models analogous to fuzzy cognitive maps fcms and neutrosophic cognitive maps ncms models several types of mod cognitive maps models are constructed in this book they are mod cognitive maps model mod dual number cognitive maps model mod neutrosophic cognitive maps model mod finite complex number cognitive maps model mod special dual like number cognitive maps model and mod special quasi dual number cognitive maps model

Smarandache Function Journal, vol. 14/2004

2023-04-18

in this book authors for the first time introduce the notion of strong neutrosophic graphs they are very different from the usual graphs and

2023-05-07

9/17

challenges to democracy
in india

neutrosophic graphs using these new structures special subgraph topological spaces are defined further special lattice graph of subgraphs of these graphs are defined and described several interesting properties using subgraphs of a strong neutrosophic graph are obtained several open conjectures are proposed these new class of strong neutrosophic graphs will certainly find applications in neutrosophic cognitive maps ncm neutrosophic relational maps nrm and neutrosophic relational equations nre with appropriate modifications

Neutrosophic Sets and Systems, Book Series, Vol. 33, 2020. An International Book Series in Information Science and Engineering

2012-07

in this book the authors for the first time construct mod relational maps model analogous to fuzzy relational maps frms model or neutrosophic relational maps nrms model using the mod rectangular or relational matrix the advantage of using these models is that the mod fixed point pair or mod limit cycle pair is obtained after a finite number of iterations

Collected Papers. Volume VI

2022-02-01

in this book the authors for the first time introduce study and develop the notion of mod graphs mod directed graphs mod finite complex number graphs mod neutrosophic graphs mod dual number graphs and mod directed natural neutrosophic graphs there are open conjectures that can help researchers in the graph theory

Advancing and Consolidating Mathematical Modelling

1976

neutrosophic sets and systems has been created for publications on advanced studies in neutrosophy neutrosophic set neutrosophic logic neutrosophic probability neutrosophic statistics that started in 1995 and their applications in any field such as the neutrosophic structures developed in algebra geometry topology etc some articles in this issue extension of hypergraph to n superhypergraph and to plithogenic n superhypergraph and extension of hyperalgebra to n ary classical neutro anti hyperalgebra neutrosophic triplet partial

Collected Papers. Volume VII

2005-12

this book gives some new types of fuzzy and neutrosophic models which
 can analyze problems in a revolutionary way the new notions of
 bigraphs bimatrices and their generalizations are used to build these
 models which will be helpful to analyze time dependent problems or
 problems which need stage by stage comparison of more than two experts
 the models expressed here can be considered as generalizations of
 fuzzy cognitive maps and neutrosophic cognitive maps
