an easy way to teach kids programming with guidance of teachers and
parents our children carry far more immense mental abilities than we
think just to reveal and explore them we need to know the tools and
methodologies i had been observing some inspiring attempts that are
aiming to teach programming to children however the thought of i am a

hmo property success the proven strategy for financial freedom through multi let
father and why doesn't my son learn programming endorsed my soul
initially i would think that it was early for him but on what
circumstances we are discussing the children who catch tens of
movements in the games and make decisions i have to admit i cannot do
that in split of a second over a tabletpc in their hands it wasn't
early for him it was late indeed my child could have started learning
programming because they had that mental capability the missing piece
in the puzzle is to introduce the appropriate tools with them first of
all call it as programming coding or whatever it is one of the best
application methods of mathematics just like application of real life
it is the life itself whether you like or not math is a part of your
life even the sentence of can i buy a kilogram of apple includes math
programming is a way of application of math and it is one of the best
ones because it includes problem solving thinking with multi
dimensions observing and testing results getting excited and loving
your creation being proud once you complete devoting for better
organizing your work putting your best for your best in a nutshell it
includes many things among life in other words just like maths
programming is also an essential part of the life while we are making
a plan for a vacation we are making a program and utilizing

wedding event we would be using a programming algorithm set during
studying to an exam we are using a likely approach for programming
just like the moments of planning a meeting with a friend driving the
marketing for a product and within all the planning of a meal and we
apply those approaches to our life the lack we don t do is to convert
those approaches into programming if we plan well we enjoy a beautiful
vacation a happy wedding a good get together with a friend we achieve
highs sales with a good marketing plan a successful exam result that
is what programming is programming defines how we manage our life it
is a part of our daily life whether we like it or not even if we are
not making professional coding programming we are making programming
in our professions and think like a programmer if you are a good
programmer your program consumes less resource and you become
successful in what your business in a nutshell programming is not an
optional occurrence in life it is the life itself we all make
programming but we create their codes differently the biggest
achievement in teaching children about how programming is done is to
enable them figure those type of life skills and background with fun
and swiftness pushing aside all the coding techniques contemplating

practice of programming and we benefit from it in every part of the
life the rest is the technicality to convert them into codes there are
so many programming languages to do that and all we have to do is to
learn the syntax thinking all the possibilities and alternates and
figuring out the most efficient is a practice of life just like in
programming i decided to channel my 30 year know how and expertise
into teaching children how to program for that objective where shall
we start how can we make it lovable what tools should we use to teach
and practice the programming how old should we make it start what is
the best methodology i chased the answers of questions like the ones
above while experimenting on that my son helped me a lot i noticed his
approach and comments i observed the other children s approach with an
honest wish to motivate and help all the children teachers and parents

code is the new literacy six hundred years ago most people couldn't
read in 1440 the invention of the printing press laid the groundwork
for massive increases in literacy and ushered in the modern era today
computers and the internet are causing a similar tectonic shift
reading and writing are foundational skills and in our digital world
coding is too but coding can be intimidating to learn what is code

although its roots lie in information theory the applications of
coding theory now extend to statistics cryptography and many areas of
pure mathematics as well as pervading large parts of theoretical
computer science from universal hashing to numerical integration
introduction to coding theory introduces the theory of error
correcting codes in a thorough but gentle presentation part i begins
with basic concepts then builds from binary linear codes and reed
solomon codes to universal hashing asymptotic results and 3

dimensional codes part ii emphasizes cyclic codes applications and the
geometric description of codes the author takes a unique more natural
approach to cyclic codes that is not couched in ring theory but by
virtue of its simplicity leads to far reaching generalizations
throughout the book his discussions are packed with applications that
include but reach well beyond data transmission with each one
introduced as soon as the codes are developed although designed as an
undergraduate text with myriad exercises lists of key topics and
chapter summaries introduction to coding theory explores enough
advanced topics to hold equal value as a graduate text and
professional reference mastering the contents of this book brings a
complete understanding of the theory of cyclic codes including their
various applications and the euclidean algorithm decoding of bch codes
and carries readers to the level of the most recent research
