strategically deployed dominant harmonies at regular periodicities and in combination with poetic phrase structural and formal cues thereby creating expectation for tonic harmonies homophony provided an ideal venue for these experiments spurred by an increasing demand for comprehensible texts composers of partsongs developed rigid text setting procedures that promoted both metrical regularity and consistent phrase rhythm this rhythmic consistency had a ripple effect it encouraged composers to design symmetrical phrase structures and to build comprehensive repetitive and predictable formal structures thus homophonic partsongs create and exploit trajectories from dominants to tonics on multiple scales from cadence to sub phrase to phrase to form ultimately this book argues for a model of tonality and of tonality s history that centers not pitch but rhythm and meter metrically oriented harmonic trajectories encourage tonal expectation and we can locate these trajectories in a variety of repertoires including those that we traditionally understand as modal
