the proof of man s destruction of the environment inconsistently flawed the scientific method is being abused and ignored the errors are not random however but are systematically biased toward attempting to prove the guilt of man in the alleged destruction of the planet objective science is disappearing and is being replaced by the pursuit of a philosophical agenda richard f sanford in environmentalism and the assault on reason chapter 1 the public has numerous misconceptions about the relationship between environmental pollution and human cancer underlying these misconceptions is an erroneous belief that nature is benign bruce n ames ph d and lois swirsky gold ph d in environmental pollution and cancer some misconceptions chapter 7 greenhouse gases have been increasing in the atmosphere largely as a result of human activities however the climate record does not show the temperature

increase and other telltale signs of the expected greenhouse effect the mathematical models used for predicting such effects are evidently not complete enough to encompass all of the relevant physical processes in the atmosphere thus throwing grave doubt on the drastic warming hypothesized for the next century's Fred Singer in Global Climate Change Facts and Fiction chapter 13 there is now no prima facie case for any expensive policy of safeguarding species without more extensive analysis than has so far been done Julian L Simon in Disappearing Species Deforestation and Data chapter 26

an ecosystem in freefall a shrinking water supply for cities and agriculture an antiquated network of failure prone levees this is the sacramento san joaquin delta the major hub of california s water system written by a team of independent water experts this analysis of the latest data evaluates proposed solutions to the delta s myriad problems through in depth economic and ecological analysis the authors find that the current policy of channeling water exports through the delta is not sustainable for any interest employing a peripheral canal conveying water around the delta instead of through it as part of a larger habitat and water management plan appears to be the best strategy to maintain both a high quality water supply and at the same time improve conditions for native fish and wildlife this important assessment includes integrated analysis of long term ecosystem and water management options and demonstrates how issues such as climate change and sustainability will shape the future published in cooperation with the public policy institute of california
