this comprehensive text explores the technologies and developments in excavations for any type of surface or underground excavation the first several chapters cover unit operations including drilling explosives and blasting mucking haulage hoisting and supports and reinforcement the book then describes excavation techniques for various operations such as tunneling raising sinking drifting stoping quarrying and surface mining underground mining pillar blasting and liquidation it also examines the design planning and analysis of excavations as well as the construction of surface and subsurface excavations such as caverns case studies focus on heavy underground blasting during pillar recoveries

surface and underground excavations methods techniques and equipment 2nd edition covers the latest technologies and developments in the excavation arena at any locale surface or underground in the first few chapters unit operations are discussed and subsequently excavation techniques are described for various operations tunnelling drifting raising sinking stoping quarrying surface mining liquidation and mass blasting as well as construction of large subsurface excavations such as caverns and underground chambers the design planning and development of excavations are treated in a separate chapter especially featured are methodologies to select stoping methods through incremental analysis furthermore this edition encompasses comprehensive sections on mining at ultra depths mining difficult deposits using non conventional technologies mineral inventory evaluation ore reserves estimation and mine closure concerns over occupational health and safety ohs environment and loss prevention and sustainable development are also addressed in advocating a solution to succeed within a scenario of global competition and recession this expanded second edition has been wholly revised brought fully up to date and includes wherever feasible the latest trends and best practices case studies global surveys and toolkits as well as questions at the end of each chapter this volume will now be even more appealing to students in earth sciences geology and in civil mining and construction engineering to practicing engineers and professionals in these disciplines as well as to all with a general or professional interest in surface and underground excavations

this book reports on the latest advances in the analysis of non stationary signals with special emphasis on cyclostationary systems it includes cutting edge contributions presented at the 7th workshop on cyclostationary systems and their applications which was held in gródek nad dunajcem poland in february 2014 the book covers both the theoretical properties of cyclostationary models and processes including estimation problems for systems exhibiting cyclostationary properties and several applications of cyclostationary systems including case studies on gears and bearings and methods for implementing cyclostationary processes for damage assessment in condition based maintenance operations it addresses the needs of students researchers and professionals in the broad fields of engineering mathematics and physics with a special focus on those studying or working with nonstationary and or cyclostationary processes

out of print since 2006 this book is now available online click here a base on the moon an expedition to mars some time in the near future for scientific or cultural reasons humanity will likely decide to pursue one of these fantastic ventures in space how can we increase the scope and reduce the cost of these ambitious activities the parts of the solar system that are most accessible from earth the moon the near earth asteroids mars and its moons are rich in materials of great potential value to humanity resources of near earth space explores the possibilities both of utilizing these materials to produce propellants structural metals refractories life support fluids and other materials on site to reduce the costs of space exploration and of providing a source of materials and energy for our own planet that would not be environmentally destructive to earth this volume summarizes the present state of the art in attempts to realize these possibilities identifying the resources mining and processing transportation and economics as a broad survey of a rapidly evolving field it is intended as a technical introduction to the use of nonterrestrial materials for scientists engineers and industrial and governmental project managers who seek to make space more accessible

as a segment of the broader science of automation robotics has achieved tremendous progress in recent decades due to the advances in supporting technologies such as computers control systems cameras and electronic vision as well as micro and nanotechnology prototyping a design helps in determining system parameters ranges and in structuring an overall better system robotics is one of the industrial design fields in which prototyping is crucial for improved functionality prototyping of robotic systems applications of design and implementation provides a framework for conceptual theoretical and applied research in robotic prototyping and its applications covering the prototyping of various robotic systems including the complicated industrial robots the tiny and delicate nanorobots medical robots for disease diagnosis and treatment as well as the simple robots for educational purposes this book is a useful tool for those in the field of robotics prototyping and as a general reference tool for those in related fields
