the human body is the entire structure of a human being it is composed of many different types of cells that together create tissues and subsequently organs and then organ systems they ensure

homeostasis and the viability of the human body

## **human body wikipedia Jan 24 2024**

human body is the physical structure of a human being. It is a complex system of organs and tissues that work together to maintain life. The human body is composed of various systems, including the skeletal system, muscular system, circulatory system, respiratory system, digestive system, and nervous system. The body is designed to maintain a state of homeostasis, which is a balance of internal conditions that allows the body to function properly. The body is also capable of adapting to changes in its environment, such as temperature, humidity, and oxygen levels. The body is a remarkable feat of engineering, and it is a testament to the power of evolution.
