this book is intended for anyone interested in learning more about how search works and how it is evaluated we all use search it's a familiar utility yet few of us stop and think about how search works what makes search results good and who if anyone decides what good looks like search has a long and glorious history yet it continues to evolve and with it the measurement and our understanding of the kinds of experiences search can deliver continues to evolve as well we will discuss the basics of how search engines work how humans use search engines and how measurement works equipped with these general topics we will then dive into the established ways of measuring search user experience and their pros and cons we will talk about collecting labels from human judges analyzing usage logs surveying end users and even touch upon automated evaluation methods after introducing different ways of collecting metrics we will cover experimentation as it applies to search evaluation the book will cover evaluating different aspects of search from search user interface ui to results presentation to the quality of search algorithms in covering these topics we will touch upon many issues in evaluation that became sources of controversy from user privacy to ethical considerations to transparency to potential for bias we will conclude by contrasting measuring with understanding and pondering the future of search evaluation
