this book examines recent developments in river flood management from the viewpoint of making space for the river and the resulting challenges for water governance different examples from europe and the united states of america are discussed that aim to green rivers including increasing river discharge for flood management enhancing natural and landscape values promoting local or regional economic development and urban regeneration making space for the river presents not only opportunities and

synergies but also risks as it crosses established institutional boundaries and touches on multiple stakeholder interests which can easily clash making space for the river helps the reader to understand the policy and governance dynamics that lead to these tensions and pays attention to a variety of attempts to organize effective and legitimate governance approaches the book helps to realize connections between policy domains problem frames and goals of different actors at different levels that contribute to decisive and legitimate action making space for the river has an international comparative character that sheds light upon both the country specific governance dilemmas which relate to specific state traditions and institutional characteristics of national water management but also uncovers interesting similarities which provide us with building blocks to formulate more generic lessons about the governance of making space for the river in different institutional and social contexts the authors of this book come from a variety of disciplines including public administration town and country planning geography and anthropology and these different disciplines bring multiple ways of knowing and understanding of making space for the river programs the book combines interdisciplinary scientific analyses of space for the river projects and programs with practical knowing and lessons drawing making space for the river is written for both practitioners and scholars and students of environmental policy spatial planning land use and water management editors jeroen warner assistant professor of disaster studies wageningen university the netherlands arwin van buuren associate professor of public administration erasmus university rotterdam the netherlands jurian edelenbos professor of public administration erasmus university rotterdam the netherlands

Object-Oriented Analysis and Design for Information Systems *2020-12-03*

locally computable nc0 functions are simple functions for which every bit of the output can be computed by reading a small number of bits of their input the study of locally computable cryptography attempts to construct cryptographic functions that achieve this strong notion of simplicity and simultaneously provide a high level of security such constructions are highly parallelizable and they can be realized by boolean circuits of constant depth this book establishes for the first time the possibility of local implementations for many basic cryptographic primitives such as one way functions pseudorandom generators encryption schemes and digital signatures it also extends these results to other stronger notions of locality and addresses a wide variety of fundamental questions about local cryptography the author s related thesis was honorably mentioned runner up for the acm dissertation award in 2007 and this book includes some expanded sections and proofs and notes on recent developments the book assumes only a minimal background in computational complexity and cryptography and is therefore suitable for graduate students or researchers in related areas who are interested in parallel cryptography it also introduces general techniques and tools which are likely to interest experts in the area
