in any software project the analysis stage is vital to the success of the project this book provides a thorough introduction to analysis and where it fits into the software engineering process the author applies his many years of experience as both a manager of software projects and as a consultant to numerous companies to illustrate successful techniques and identify potential pitfalls based on courses at columbia university for a diverse audience of students and professionals the author is concerned throughout to emphasise the stages of analysis and to identify many alternative modelling tools that an analyst can use particular emphasis is placed on joint application development and on prototyping readers are assumed to have a reasonable understanding of computer concepts and terminology making this suitable for a first level analysis course or for information systems professionals who need an in depth understanding of the principles of the analysis and design process

the last ten years have seen explosive growth in the technology available to the collision analyst changing the way reconstruction is practiced in fundamental ways the greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis the widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data create 3d models and visualize and analyze crash vehicles and environments the introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction because of the technological changes occurring in the industry many sae papers have been written to address the validation and use of new tools for collision reconstruction collision reconstruction methodologies volumes 1 12 bring together seminal sae technical papers surrounding advancements in the crash reconstruction field topics featured in the series include night vision study and photogrammetry vehicle event data recorders motorcycle heavy vehicle bicycle and pedestrian accident reconstruction the goal is to provide the latest technologies and methodologies being

introduced into collision reconstruction appealing to crash analysts consultants and safety engineers alike

the evolution of the automotive transmission has changed rapidly in the last decade partly due to the advantages of highly sophisticated electronic controls this evolution has resulted in modern automatic transmissions that offer more control stability and convenience to the driver electronic transmission controls contains 68 technical papers from sae and other international organizations written since 1995 on this rapidly growing area of automotive electronics this book breaks down the topic into two sections the section on stepped transmissions covers recent developments in regular and 4 wheel drive transmissions from major auto manufacturers including daimlerchrysler general motors toyota honda and ford technology covered in this section includes smooth shift control automatic transmission efficiency mechatronic systems fuel saving technologies shift control using information from vehicle navigation systems and fuzzy logic control the section on continuously variable transmissions presents papers that demonstrate that cvts offer better efficiency than conventional transmissions technologies covered in this section include powertrain control fuel consumption improvement development of a 2 way clutch system internal combustion engines with cvts in passenger cars control and shift strategies and cvt application to hybrid powertrains the book concludes with a chapter on the future of electronic transmissions in automobiles

ad hoc and ubiquitous computing technologies have received extensive attention in both the academia and industry with the explosive growth of wireless communication devices these technologies are beneficial for many applications such as offering futuristic high bandwidth access for users and are expected to offer more exciting and efficient services anytime and anywhere in order to satisfy these diverse applications the design issues of various wireless networks such as ad hoc sensor and mesh networks are extremely complicated and there are a number of

technique challenges that need to be explored involving every layer of the osi protocol stack this book aims to provide a complete understanding of these networks by investigating the evolution of ad hoc sensor and mesh networking technologies from theoretic concept to implementation protocols from fundamentals to real applications it provides the necessary background material needed to go deeper into the subject and explore the research literature the explanation in the book is therefore sufficiently detailed to serve as a comprehensive reference for students instructors researchers engineers and other professionals building their understanding of these networks sample chapter s chapter 1 survey on link quality models in wireless ad hoc networks 235 kb contents mobile ad hoc networks survey on link quality models in wireless ad hoc networks m lu j wu scalable multicast routing in mobile ad hoc networks r menchaca mendez j j garcia luna aceves tcp congestion and admission control protocols in ad hoc networks a mishra et al wireless ad hoc networks with directional antennas b alawieh et al peer to peer and content sharing in vehicular ad hoc networks m abuelela s olariu properties of the vehicle to vehicle channel for dedicated short range communications l cheng et al radio resource management in cellular relay networks k d lee v c m leung game theoretic tools applied to wireless networks h liu et al wireless sensor networks wireless sensor networks oco routing protocols a jamalipour m a azim handling qos traffic in wireless sensor networks m younis et al mobility in wireless sensor networks a asok et al delay tolerant mobile sensor networks y wang h wu integration of rfid and wireless sensor networks h liu et al integrating sensor networks with the semantic y pei b wang effective multiuser broadcast authentication in wireless sensor networks k ren et al security attacks and challenges in wireless sensor networks a s k pathan c s hong information security in wireless sensor networks a ouadjaout et al wireless mesh networks network architecture and flow control in multi hop wireless mesh networks d nandiraju et al multi hop mac ieee 802 11s wireless mesh networks r c carrano et al channel assignment in wireless mesh networks w fu et al multi hop multi path and load balanced routing in wireless mesh networks s mishra n shenoy mobility management in wireless mesh networks p wu et al selfishness and security schemes for wireless mesh network l santhanam et al readership advanced undergraduates and graduate students in computer engineering instructors researchers engineers and other professionals
