British Journal of Ophthalmology 1924

this book provides an overview of the latest technological advances in various ophthalmology subspecialties from the latest glaucoma shunt devices to mobile adaptors for posterior segment evaluation this book has it all it gives readers a valuable head start for adopting the uber new and cutting edge products now available on the market being familiar with these new products and technologies will help both new and established ophthalmologists make effective and efficient choices while also helping their practices stand out from the crowd perhaps no other branch of medicine is as technology oriented as ophthalmology be it lasers fiber optics robotics stem cells or nanoparticles every cutting edge step that research and development takes is rapidly integrated into everyday eye practice as part of the series current practices in ophthalmology this volume is intended for residents fellows in training generalist ophthalmologists specialists and vision science researchers alike

Journal of Ophthalmology, Otology and Laryngology; 13, (1901) 2021-09-09

excerpt from the american journal of ophthalmology vol 12 january 1895 it may be of interest to note that the gross productions of these firms amounted to over 2 000 000 in 1892 such practical support certainly portends an enduring future of the prism diopter about which so much pro and con has been written since its first appearance in ophthalmic literature 2 in this paper it will be taken for granted that the reader is at least familiar with the principles of the prism diopter so that only the relation which exists between it and the lens diopter will here be repeated to wit a lens which is decentered one centimeter will produce as many prism diopters as the lens has diopters of refraction a knowledge of this law will frequently enable the oculist to change the form of his prescription so that it may safely be entrusted for execution to any optician capable of locating the optical center of a lens and who is provided with no other instrument of measure than a pocket centimeter scale as the optician generally speaking is not allowed to exercise his own judgment in transforming prescriptions it is necessary that the oculists instructions be explicit respecting the proper method of putting his prescription into the best practical form a few examples will serve to illustrate the method of applying the law of decentration about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
