students and fans of broadway although upstaged by the tragic appearance of the human immunodeficiency virus herpes simplex viruses hsv types 1 and 2 continue to be major human pathogens against which we lack acceptable vaccines or other means of immunological control the virus is large and complex coding for 70 or more proteins although many mysteries remain to be unraveled our knowledge base regarding genomic organization gene expression and regulation pathogenesis and immune recognition of component parts is quite considerable indeed meetings devoted entirely to herpesviruses are conspicuous by their frequency and excellent yet sometimes exclusive attendance the purpose of this volume is to compile in a single book a series of reviews by leading investigators that deal with various aspects of virus host interactions and which hopefully will provide clues as to how to best manage hsv from an immunobiological perspective ultimately one anticipates that a full understanding of virus host interaction will lead to strategies useful for the prevention and control of hsv the state of current progress with conventional vaccines is presented as is a chapter on intracellular
