the fragment molecular orbital fmo method is a fast linear scaling quantum mechanical method employed by chemists and physicists all over the world it provides a wealth of properties of fragments from quantum chemical calculations a bottomless treasure pit for data mining and machine learning however there is no user friendly description of its usage in the widely employed quantum chemical open source software gamess nor is there any book covering the usage of gamess in general this leaves very many interested users to their own devices to get through a variety of problems with very cryptic descriptions of keywords in the program manual and no guide whatsoever as to what options should be set for particular scientific tasks this book is the panacea to many frustrations the main focus of the book is to build a solid bridge connecting fmo users to gamess by giving a helpful introduction of various fmo methods as needed for particular problems found in computational chemistry and describing in detail how to do these simulations and understand the results from the output of the program the book also covers parallelization strategies for attaining high parallel efficiency in massively parallel computations and provides means to analyze performance and design a solution for overcoming performance bottlenecks a special section is devoted to dealing with problems in executing gamess arising from computational environment and user errors finally 14 carefully selected types of applications are discussed in detail describing the input keywords and explaining where to find the main results in the text based output

this thesis examines various aspects of excess excitation energy dissipation via dynamic changes in molecular structure vibrational modes and solvation the computational work is carefully described and the results are compared to experimental data obtained using femtosecond spectroscopy and x ray scattering the level of agreement between theory and experiment is impressive and provides both a convincing validation of the method and significant new insights into the chemical dynamics and molecular determinants of the experimental data hence the method presented in the thesis has the potential to become a very important contribution to the rapidly growing field of femtosecond x ray science a trend reflected in the several free electron x ray lasers xfels currently being built around the world light induced chemical processes are accompanied by molecular motion of electrons and nuclei on the femtosecond time scale uncovering these dynamics is central to our understanding of the chemical reaction on a fundamental level asmus o dohn has implemented a highly efficient qm mm direct dynamics method for predicting the solvation dynamics of transition metal complexes in solution

since first developed in the early sixties silicon chip technology has made vast leaps forward from a rudimentary circuit with a mere handful of transistors the chip has evolved into a technological wonder packing millions of bits of information on a surface no larger than a human thumbnail and most experts predict that in the near future we will see chips with over a billion bits quantum dots are small devices that contain a tiny droplet of free electrons they are fabricated in semiconductor materials and have typical dimensions ranging from nanometres to a few microns the size and shape of these structures and therefore the number of electrons they contain can be precisely controlled a quantum dot can have anything from a single electron to a collection of several thousands the physics of quantum dots shows many parallels with the behaviour of naturally occurring quantum systems in atomic and nuclear physics as in an atom the energy levels in a quantum dot become quantised due to the confinement of electrons unlike atoms however quantum dots can be easily connected to electrodes and are therefore excellent tools for studying atomic like properties this new book brings together leading research from throughout the world in this field of the future which has become the field of today
