the world as will and idea is the central work of the german philosopher arthur schopenhauer taking the transcendental idealism of immanuel kant as his starting point schopenhauer argues that the world we experience around us the world of objects in space and time and related in causal ways exists solely as representation dependent on a cognizing subject not as a world that can be considered to exist in itself our knowledge of objects is thus knowledge of mere phenomena rather than things in themselves schopenhauer identifies the thing in itself the inner essence of everything as will a blind unconscious aimless striving devoid of knowledge outside of space and time and free of all multiplicity the world as representation is therefore the objectification of the will the world as will and idea marked the pinnacle of schopenhauer s philosophical thought he spent the rest of his life refining clarifying and deepening the ideas presented in this work without any fundamental changes this carefully crafted digicat ebook is formatted for your ereader with a functional and detailed table of contents the world as will and idea representation german die welt als wille und vorstellung is the central work of the german philosopher arthur schopenhauer published here as in the original english translation in 3 volumes the main body of the work states at the beginning that it assumes prior knowledge of immanuel kant s theories see his critique of pure reason isbn 9781537260051 schopenhauer recommended that the student begin with the final appendix found in volume 3 titled on the fourfold root of the principle of sufficient reason before the rest of the book the first volume contains four books two on the world as will and two on the world as idea while the second and third volumes contain supplementary material to each of the

this volume comprises adorno s first lectures specifically dedicated to the subject of the dialectic a concept which has been key to philosophical debate since classical times while discussing connections with plato and kant adorno concentrates on the most systematic development of the dialectic in hegel s philosophy and its relationship to marx as well as

elaborating his own conception of dialectical thinking as a critical response to this tradition delivered in the summer semester of 1958 these lectures allow Adorno to explore and probe the significant difficulties and challenges this way of thinking posed within the cultural and intellectual context of the post war period in this connection he develops the thesis of a complementary relationship between positivist or functionalist approaches particularly in the social sciences as well as calling for the renewal of ontological and metaphysical modes of thought which attempt to transcend the abstractness of modern social experience by appeal to regressive philosophical categories while providing an account of many central themes of Hegelian thought he also alludes to a whole range of other philosophical literary and artistic figures of central importance to his conception of critical theory notably Walter Benjamin and the idea of a constellation of concepts as the model for an open or fractured dialectic beyond the constraints of method and system these lectures are seasoned with lively anecdotes and personal recollections which allow the reader to glimpse what has been described as the workshop of Adorno's thought as such they provide an ideal entry point for all students and scholars in the humanities and social sciences who are interested in Adorno's work as well as those seeking to understand the nature of dialectical thinking
