this book provides an introduction to the work of the scientists who  
were attempting literally to create life from scratch starting with  
molecular components that they hope to assemble into the world s first  
synthetic living cell the book also examines how scientists have  
unlocked the three secrets of life describes the key role played by  
atp the ultimate driving force of all life and outlines the many  
attempts to explain how life first arose on earth a puzzle that has  
given birth to a wide range of theories

## ***What is Life ? 1992***

a nobel prize winner a great man and a great scientist erwin  
schrödinger has made his mark in physics but his eye scans a far wider  
horizon here are two stimulating and discursive essays which summarize  
his philosophical views on the nature of the world schrödinger s world  
view derived from the indian writings of the vedanta is that there is  
only a single consciousness of which we are all different aspects he

admits that this view is mystical and metaphysical and incapable of logical deduction but he also insists that this is true of the belief in an external world capable of influencing the mind and of being influenced by it schrödinger s world view leads naturally to a philosophy of reverence for life
