social critics and artificial intelligence experts have long prophesized that computers and robots would soon relegate humans to the dustbin of history many among the general population seem to have shared this fear of a dehumanized future but how are people in the twenty first century actually reacting to the ever expanding array of gadgets and networks at their disposal is computer anxiety a significant problem paralyzing and terrorizing millions or are ever proliferating numbers of gadgets being enthusiastically embraced machines that become us explores the increasingly intimate relationship between people and their personal communication technologies in the first book of its kind internationally recognized scholars from the united states and europe explore this topic among the technologies analyzed include the internet personal digital assistants pdas mobile phones networked homes smart fabrics and wearable computers interactive location badges and implanted monitoring devices the authors discuss critical policy issues such as the problems of information resource access and equity and the recently discovered digital dropouts phenomena the use of the word become in the book s title has three different meanings the first suggests how people use these technologies to broaden their

abilities to communicate and to represent themselves to others thus the technologies become extensions and representatives of the communicators a second sense of become applies to analysis of the way these technologies become physically integrated with the user s clothing and even their bodies finally contributors examine fashion aspects and uses of these technologies that is how they are used in ways becoming to the wearer the conclusions of many chapters are supported by data including ethnographic observations attitude surveys and case studies from the united states britain france italy finland and norway this approach is especially valuable
