Practical Computer Vision with SimpleCV

2012

learn how to build your own computer vision cv applications quickly and easily with simplecv an open source framework written in python through examples of real world applications this hands on guide introduces you to basic cv techniques for collecting processing and analyzing streaming digital images you ll then learn how to apply these methods with simplecv using sample python code all you need to get started is a windows mac or linux system and a willingness to put cv to work in a variety of ways programming experience is optional capture images from several sources including webcams smartphones and kinect filter image input so your application processes only necessary information manipulate images by performing basic arithmetic on pixel values use feature detection techniques to focus on interesting parts of an image work with several features in a single image using the numpy and scipy python libraries learn about optical flow to identify objects that change between two image frames use simplecv s command line and code editor to run examples and test techniques
