Rethinking Homework

2001-09-09

is homework an essential component of rigorous schooling or a harmful practice that alienates and discourages a significant number of students the debate over homework has gone on for decades but schools and families have changed in many ways and as author cathy vatterott notes there s a growing suspicion that something is wrong with homework rethinking homework best practices that support diverse needs examines the role homework has played in the culture of schooling over the years how such factors as family life the media and the balance movement have affected the homework controversy and what research and educators common sense tells us about the effects of homework on student learning the best way to address the pro and anti homework controversy is not to eliminate homework instead the author urges educators to replace the old paradigm characterized by longstanding cultural beliefs moralistic views the puritan work ethic and behaviorist philosophy with a new paradigm based on the following elements designing quality homework tasks differentiating homework tasks deemphasizing grading of homework improving homework completion and implementing homework strategies and support programs numerous examples from teachers and schools that have revised their practices and policies for homework illustrate the new paradigm in action the end product is homework that works for all students at all levels

Homework, Learning and Academic Success: The Role of Family and Contextual Variables

2020-02-24

the main purpose of this research topic is to analyze and identify the main family and contextual variables that are involved in the process of carrying out homework this will require studying the role played by teachers students and families in order to ensure that schoolwork is a useful learning tool although the role of the student is obviously crucial in homework research has focused on the cumulative time spent by the student carrying out homework however the time spent on homework is not in itself evidence of the student s involvement nor is time spent indicative of quality time indeed an excess of time can sometimes

denote low competence in a field of knowledge while spending less time on homework could be indicative of high competence it is more likely that a high dedication of time spent on homework reflects high motivation or comprehension deficits rather than commitment to learning or academic motivation in tandem with the role of the student teachers as responsible for prescribing homework assignments for students also become central players in the process of completing homework assignments the decisions that teachers make about homework prescriptions and the amount and type of tasks they set will determine to a large extent the quality of the homework process including the student's motivation and the student's level of engagement with homework furthermore the fact that homework is useful interesting and motivating for students will depend on how the teacher prescribes those tasks and the connection established with classroom learning teacher feedback also acquires particular relevance for this point by helping the students to accurately estimate the quality of their progress and overcome the difficulties they may have encountered in carrying out their homework lastly the effectiveness of teacher feedback depends on its contribution to the student's educational progress and how that student will perform in the future in addition to the student who performs the task and the teacher who prescribes and corrects it we must not lose sight of parents' role although there are discrepancies regarding the role that parents play in relation to homework it is evident that their implication has important consequences not only on the final result of those tasks but also on the very process of carrying them out everything seems to indicate that the family environment and more specifically the support and feedback provided by parents is a factor that can determine the involvement of students in school duties in this way providing emotional support encouraging children to get involved can contribute positively to improving their motivation and interest in the performance of homework the objective of this research topic is to provide researchers and professionals in psychology and education settings with some of the most recent empirical evidence regarding the homework process its prescription and correction overall we aim to cease making homework a source of conflict and controversy at the socio-educational level in order to provide useful instruments for improving the quality of student learning this work was developed with the financing of the research projects edu2013 44062 p mineco edu2017 82984 p meic

Reframing Education

2020-01-04

reframing is the procedure of changing the focus of a situation or problem and examining it from a

different perspective it encompasses looking at the reciprocal side of a problem or examining a situation from a broader base reframing can be as simple as to make the problem the solution no matter what we believe in we should be admitting that as time marches things move forward and education should move forward with it students need different thoughts and beliefs to pilot a world we can't foresee we should be pushing with them the wheel of humanity a few feet farther so that we can show them that they have their own character separate and apart from our own reframing education is a refreshing departure from the current preoccupation with the new the novel or the advanced in education it speaks to teachers school leaders and parents in profound and significant ways

Literacy Today

2014-02-04

Does assigning fifty math problems accomplish any more than assigning five? Is memorizing word lists the best way to increase vocabulary, especially when it takes away from reading time? And what is the real purpose behind those devilish dioramas? The time our children spend doing homework has skyrocketed in recent years. Parents spend countless hours cajoling their kids to complete such assignments, often without considering whether or not they serve any worthwhile purpose. Even many teachers are in the dark. Only one of the hundreds the authors interviewed and surveyed had ever taken a course specifically on homework. During training, the truth according to Sara Bennett and Nancy Kalish is that there is almost no evidence that homework helps elementary school students achieve academic success, and little evidence that it helps older students. Yet the nightly burden is taking a serious toll on America's families. It robs children of the sleep, play, and exercise time they need for proper physical, emotional, and neurological development, and it is a hidden cause of the childhood obesity epidemic, creating a nation of homework potatoes. In the case against homework, Bennett and Kalish draw on academic research, interviews with

educators parents and kids and their own experience as parents and successful homework reformers to offer detailed advice to frustrated parents you ll find out which assignments advance learning and which are time wasters how to set priorities when your child comes home with an overstuffed backpack how to talk and write to teachers and school administrators in persuasive nonconfrontational ways and how to rally other parents to help restore balance in your children s lives empowering practical and rigorously researched the case against homework shows how too much work is having a negative effect on our children s achievement and development and gives us the tools and tactics we need to advocate for change also available as an ebook
