pharmaceutical process development is aimed at both graduates and postgraduates interested in a career in the pharmaceutical industry and informs them about the breadth of the work carried out in chemical research and development departments

food colloids interactions microstructure and processing describes the principles and practice underlying the formulation of food emulsions dispersions gels and foams emphasis is on understanding how the functional properties of biopolymers and surfactants determine the texture and shelf life of multiphase food materials this book provides essential new findings by experts in the field on specific topics including the interfacial rheological properties of proteins the use of microscopy and image analysis to probe structure and phase transitions the control of colloidal stability during thermal and mechanical processing the interactions of proteins with polysaccharides and emulsifiers the incorporation of nutraceuticals into food colloids and the consumer perception of taste and texture food colloids interactions microstructure and processing provides a link between current research on the fundamental physical chemistry of colloidal systems and the requirements of the food technologist to use modern colloid science in new product formulation it is suitable for postgraduates and researchers both in industry and academia

everyone can benefit from an understanding of environmental science and the chemistry underlying issues such as global warming ozone depletion energy water pollution and waste disposal this new edition presents environmental science to the non science student focusing on environmental chemistry
