inductive method

May 12 2024

inductive method is a process of reasoning that starts with specific observations and leads to a general conclusion. It is often used in scientific research to develop a theory based on empirical data.

deductive approach

Mar 10 2024

6 the main difference between inductive and deductive research is the direction of the reasoning process. Inductive research starts with specific observations and leads to a general conclusion, while deductive research starts with a general theory and leads to specific observations.

inductive and deductive reasoning is that inductive reasoning aims at developing a theory while deductive reasoning aims at testing an existing theory in other words inductive reasoning moves from specific observations to broad generalizations

deductive reasoning is a form of argument that in contrast to inductive reasoning allows for the possibility that a conclusion can be false even if all of the premises are true this difference between deductive and inductive reasoning is that deductive reasoning aims at testing an existing theory while inductive reasoning aims at developing a theory
