the purpose of this publication is to introduce a new simpler and more effective way in which to interpret pharmaceutical aerosol particle size data from orally inhaled products oips currently the compendial and regulatory requirements dictate the need for measurements by full resolution multi stage cascade impactor ci a process that is demanding for the operator time consuming prone to experimental error and challenging for method transfers from one laboratory to another furthermore we shall show that the current practice of reducing information from mass weighted aerodynamic particle size distribution apsd measurements through the use of ci stage groupings is not the most effective decision making tool for oip quality control qc in comparison with newly introduced mutually independent efficient data analysis eda metrics that can be derived either from full resolution or abbreviated impactor measurements aim

this report describes the maccs computer code the purpose of this code is to simulate the impact of severe accidents at nuclear power plants on the surrounding environment maccs has been developed for the us nuclear regulatory commission to replace the previously used crac2 code and it incorporates many improvements in modeling flexibility in comparison to crac2 the principal phenomena considered in maccs are atmospheric transport mitigative actions based on dose projections dose accumulation by a number of pathways including food and water ingestion early and latent health effects and economic costs the maccs code can be used for a variety of applications these include 1 probabilistic risk assessment pra of nuclear power plants and other nuclear facilities 2 sensitivity studies to gain a better understanding of the parameters important to pra and 3 cost benefit analysis this report is composed of three volumes volume i the user s guide describes the input data requirements of the maccs code and provides directions for its use as illustrated by three sample problems volume ii the model description describes the underlying models that are implemented in the code and volume iii the programmer s reference manual describes the code s structure and database management

fluoroplastics volume 1 compiles in one place a working knowledge of the polymer chemistry and physics of non melt processible fluoropolymers with detailed descriptions of commercial processing methods material properties fabrication and handling information technologies and applications also history market statistics and safety and recycling aspects are covered both volumes contain a large amount of specific property data which is useful for users to readily compare different materials and align material structure

with end use applications volume 1 concentrates mostly on polytetrafluoroethylene and polychlorotrifluoroethylene and their processing techniques which are essentially non melt processes used across a broad range of industries including automotive aerospace electronic food beverage oil gas and medical devices since the first edition was published many new technical developments and market changes have taken place and new grades of materials have entered the market this new edition is a thoroughly updated and significantly expanded revision covering new technologies and applications and addressing the changes that have taken place in the fluoropolymer markets fluoroplastics volume 1 is an all encompassing handbook for non melt processible fluoropolymers a unique and invaluable reference for professionals in the fluoropolymer industry and fluoropolymer application industries exceptionally broad and comprehensive coverage of non melt processible fluoropolymers processing and applications practical approach written by long standing authority in the fluoropolymers industry new technologies materials and applications are included in the new edition

cstr called x0066 in the conversationally oriented real time program generating system corps library is a general purpose computer program for the strength theory analysis or design of reinforced concrete beams or columns in accordance with etl 1110 2 265 for hydraulic structures it is intended to be an easy to use program program cstr is versatile in that its capabilities extend from design of new concrete hydraulic structures to investigation of already existing designs its analysis is based on the rectangular stress block described in etl 1110 2 265 the design procedure is computer aided rather than automatic and computes the minimum reinforcement required for a given width and depth and displays the resulting interaction diagram the program also computes and prints the minimum effective depth of a given section which satisfies strength requirements and steel ratio requirements without compressive reinforcement the investigation procedure shows interaction diagrams and calculates compliance with ductile failure criteria originator supplied keywords include computer aided design concrete products evaluation cstr computer program hydraulic structures fortran mechanical drawings

this meeting on hadron spectroscopy and the confinement problem took place from june 27 to july 8 1995 the first four days were at queen mary and westfield college london and the last six at the university college of swansea wales the reason for the split sites was a question of accomodating the 54 students and 12 lecturers however it was enjoyed by all concerned providing the opportunity to sample the nightlife of london one week and enjoy the delightful coastal area around swansea the following week the meeting immediately preceded the hadron 95 conference in manchester the contents of this volume run roughly parallel to the order of the lectures martin faessler s brief and that of madjid boutemour was to review experimental tech niques as well as physics results we have tried to review all the areas which are currently active experimentally this means mostly light meson spectroscopy however simon capstick gave us a welcome review of baryon spectroscopy and the coming cebaf program this is an opportunity to thank nato for their generous financial support and also the two host institutions for excellent coordination and an enjoyable stay

process based morphodynamic modelling is one of the relatively new tools at the disposal of coastal scientists engineers and managers on paper it offers the possibility to analyse morphological processes and to investigate the effects of various measures one might consider to alleviate some problems for these to be applied in practice a model should be relatively straightforward to set up it should be accurate enough to represent the details of interest it should run long enough and robustly to see the real effects happen and the physical processes represented in such a way that the sediment generally goes in the right direction at the right rate next practitioners must be able to judge if the patterns and outcomes of the model are realistic and finally translate these colour pictures and vector plots to integrated parameters that are relevant to the client or end user in a nutshell this book provides an in depth review of ways to model coastal processes including many hands on exercises

the movement of sediment and associated pollutants over the landscape and into water bodies is of increasing

concern with respect to pollution control prevention of muddy floods and environmental protection in addition the loss of soil on site has implications for declining agricultural productivity loss of biodiversity and decreased amenity and landscape value the fate of sediment and the conservation of soil are important issues for land managers and decision makers in developing appropriate policies and solutions managers and researchers are making greater use of erosion models to characterise the processes of erosion and their interaction with the landscape a study of erosion requires one to think in terms of microseconds to understand the mechanics of impact of a single raindrop on a soil surface while landscapes form over periods of thousands of years these processes operate on scales of millimetres for single raindrops to mega metres for continents erosion modelling thus covers quite a lot of ground this book introduces the conceptual and mathematical frameworks used to formulate models of soil erosion and uses case studies to show how models are applied to a variety of purposes at a range of spatial and temporal scales the aim is to provide land managers and others with the tools required to select a model appropriate to the type and scale of erosion problem to show what users can expect in terms of accuracy of model predictions and to provide an appreciation of both the advantages and limitations of models problems covered include those arising from agriculture the construction industry pollution and climatic change and range in scale from farms to small and large catchments the book will also be useful to students and research scientists as an up to date review of the state of art of erosion modelling and through a knowledge of how models are used in practice in highlighting the gaps in knowledge that need to be filled in order to develop even better models

the book begins with the fundamentals of light scattering first by individual particles then by small groups of particles and finally by the trillions of particles present in a real life paint film from there dr diebold focuses on application of these fundamentals to paint formulation the scope includes both theory and practice with an emphasis on application from both performance and cost standpoints the book gives a clear understanding of light scattering principles and application of these principles to paint formulation with a focus on tio<sub>2</sub> the strongest scattering material available to paint formulators the reader will be in a position to formulate and reformulate paints for maximum cost effectiveness application of light scattering to coatings a users guide is ideal for a range of professions working in paint formulation and manufacturing this book also distills difficult theories light scattering paint formulation into easy to understand concepts

adopts a qualitative perspective with minimal use of complex equations making key scientific concepts accessible to all paint formulators without a prerequisite of higher mathematics offers an accessible resource for formulators new to the field while maintaining a high degree of relevance to experienced coating formulators discusses the interplay between resin tio2 pigments and paint extenders with regard to paint performance and cost presents an unbiased assessment of opacifying potential of tio2 alternatives outlines strategies for minimizing overall costs of paints
